A Privacy Commission spokesperson said while technologies bring significant benefits to individuals and agencies, they also introduced new and novel privacy risks that need to be managed. Examples included leaking of personal information in AI outputs, impersonation and fraud, nonconsensual fake images, audio and video, and automated decisions based on incorrect information or biased processing.

Using AI tools to screen CVs could over focus on data (qualifications and experience) and not take into account other skills, she says.

Reference 3 - 1.49% Coverage

Schellmannâ€™s research raises concerns about false assumptions built into the tools - such as the idea that voice intonation predicts success in a job or non-scientific analysis of facial expressions or personality traits.

Reference 4 - 0.56% Coverage

Schellmann is calling for regulation of AI hiring tools to check for discrimination.

Automation has been a contentious subject for INZ, with officials suggesting it was a sensitive subject and academics concerned it could either bake human bias into decisions, or affect staff decisions

through profiling.

Reference 2 - 2.90% Coverage

The Ministry of Social Development has developed guidelines for business rules, data-based algorithms and statistically or analytically derived patterns in machine learning or artificial intelligence, and spells out checks that are needed for transparency, oversight and to overcome bias. Bishop said similar safeguards would be in place for INZ's automated decisions, which were already enabled through legislation.
