Reference 1 - 8.64% Coverage

"Any changes would first require rigorous assurances about the effectiveness, security, fairness and accountability of the product in question," a spokesperson said in a statement. "While we cannot speak to decisions that may occur in the future, this is not a focus of our current work."

<Files\\Processed x Highly relevant\\2024-05-15 - RNZ - Risk Maori and Pasifika will f> - § 3 references coded [8.28% Coverage]

Reference 1 - 2.52% Coverage

There is a real risk of discrimination against Māori and Pasifika with police's expanding use of biometric data, a Māori technology and data ethicist says.

Reference 2 - 2.78% Coverage

Dr Karaitiana Taiuru, a leading Māori AI and data ethicist, told Midday Report people of colour were unfairly discriminated against by biometric technology used by police.

Reference 3 - 2.98% Coverage

"I suspect we could see some false positives, so people being falsely accused of being a person that they're not and we know this happens frequently in America with people of colour."

Reference 1 - 2.31% Coverage

A Privacy Commission spokesperson said while technologies bring significant benefits to individuals and agencies, they also introduced new and novel privacy risks that need to be managed. Examples included leaking of personal information in AI outputs, impersonation and fraud, nonconsensual fake images, audio and video, and automated decisions based on incorrect information or biased processing.

Reference 2 - 0.90% Coverage

A Human Rights Commission spokesperson said in practice it could be hard for individuals to know whether an AI-based system had discriminated against them.

Reference 3 - 1.54% Coverage

The Commission supports calls for legislation relating to AI in Aotearoa, to ensure that peopleâ€™s right to privacy and rights to equality and non-discrimination could be adequately protected. Such legislation should be grounded in te Tiriti o Waitangi, they said.

<Files\\Processed x Highly relevant\\2024-08-20 - RNZ - NZ Police finally has facial r> - § 1 reference

coded [1.07% Coverage]

Reference 1 - 1.07% Coverage

The tech - there are several police use - must have "sufficiently high accuracy and ... not operate with an unacceptable level of bias or discrimination".

<Files\\Processed x Highly relevant\\2024-08-25 - STF - Jobseeker interviewed by 100 r> - § 2 references coded [3.61% Coverage]

Reference 1 - 0.86% Coverage

More companies in New Zealand are using AI to recruit staff.Job seekers are concerned that chat bots are rejecting them unfairly.

Reference 2 - 2.74% Coverage

Like Shastry, heâ€™s concerned the bot might unintentionally discriminate against people whose first language is not English.
â€œIn the video interview they check things like your tone. But people use different words and phrases. I donâ€™t see how a bot can decide what youâ€™re like in real life, and why someone is seen as better than someone else for what seem to be random things unrelated to the role.â€

<Files\\Processed x Highly relevant\\2024-09-21 - RNZ - ACC trial of artificial intell> - § 1 reference coded [0.44% Coverage]

Reference 1 - 0.44% Coverage

"The primary risk is potential inherent AI bias.

<Files\\Processed x Highly relevant\\2024-09-23 - RNZ - Schools abandon take-home assi> - § 1 reference coded [0.81% Coverage]

Reference 1 - 0.81% Coverage

Second-language students are a big percentage of the false positives through AI detectors.

<Files\\Processed x Highly relevant\\2025-02-02 - RNZ - New guidelines released for pu> - § 1 reference coded [3.15% Coverage]

Reference 1 - 3.15% Coverage

Teams that use AI should be diverse to help avoid bias and discrimination in results, said another guideline.

<Files\\Processed x Highly relevant\\2025-02-04 - RNZ - New Zealand public services re> - § 1 reference coded [3.39% Coverage]

Reference 1 - 3.39% Coverage

Baker said AI algorithms needed to recognise New Zealand's unique population.
"We know that equity is a huge challenge in New Zealand. We've got so many examples of how Māori

in particular miss out on healthcare equity and because there are conscious and unconscious biases built into systems. That will be one area where we might have
to adapt these principles for our local needs and our local populations," he said.

<Files\\Processed x Highly relevant\\2025-03-20 - WKT - Good luck getting a job withou> - § 1 reference coded [3.02% Coverage]

Reference 1 - 3.02% Coverage

The use of AI by employers to search for and screen candidates raises the obvious risk of injustices. Candidates who didnâ€™t suit their computer algorithms might find themselves increasingly shut out of the jobs market. But AI might be preferable to blunter, less intelligent tools that recruiters already use to screen and filter out candidates.

<Files\\Processed x Highly relevant\\2025-04-09 - BOP - MSD denies plans for automated> - § 1 reference coded [2.79% Coverage]

Reference 1 - 2.79% Coverage

She said the Automated Decision Making Standard provides a framework and has specific safeguards, including the requirement that beneficiaries get their correct entitlement and are not discriminated against.

<Files\\Processed x Highly relevant\\2025-04-09 - RNZ - Ministry of Social Development> - § 1 reference coded [7.77% Coverage]

Reference 1 - 7.77% Coverage

"If you open this legal loophole here, how far can you take it? AI is artificial, but it's not that intelligent - the intelligent part is still being worked out, but because of that there are decisions that could be made that are unfair, that does marginalise those who are on the fringes of society and makes things a lot worse."
Both the Salvation Army and Law Society have called for the clause to be scrapped, in submissions to the select committee considering the bill.
The Salvation Army's submission stated that automatic decision making "cannot account for the complexities we often see in the individuals we support", such as financial hardship, addictions, mental health issues or unstable living conditions.
"Automated systems risk making inappropriate decisions that could increase hardship for those we support," it said.

<Files\\Processed x Highly relevant\\2025-04-24 - RNZ - AI use for job seekers- Defaul> - § 3 references coded [5.77% Coverage]

Reference 1 - 3.37% Coverage

AI expert Dr Karaitiana Taiuru specialises in the effect of automated decision making on indigenous and vulnerable communities. He said it all comes down to the data and algorithms used and if that reflects the nuances of such groups of people.
"The data MSD has could very easily reflect bias against Maori, Pasifika and immigrants so in the ideal world companies and organisations would use those same communities to consult on the algorithms they're using, or how the automated system will work."

Reference 2 - 1.50% Coverage

"It provides a framework for good practice and introduces specific automatic decision making safeguards, including the requirement that our clients get their correct entitlement and are not discriminated against," Gill said.

Reference 3 - 0.90% Coverage

AUT computer science professor and AI expert Dr Edmund Lai said some degree of bias is unavoidable in both human and computer systems.
