Fake explicit images of teenage students which appear to have been created using artificial intelligence have been circulating at a North Canterbury high school.
Rangiora High School principal Bruce Kearney said an assembly was held yesterday after staff became aware of the images being shared. Kearney reported the situation to police, who he said were investigating. At least 15 students, both boys and girls, had been targeted.
â€œEssentially what [the image creators] have done is they have put them through some sort of software programme so they [appear] naked. â€œThis is a serious incident, and we will be taking a serious approach to this.â€
Kearney said staff did not yet know who created the images, but said the school, which had more than 1500 students on its roll, was supporting those affected. â€œTalk about hurtful and damaging to those people involved. Your heart just goes right out to them. Itâ€™s just so wrong.â€

Netsafe chief executive Brent Carey said AI which manipulated images to remove clothing, commonly referred to as â€œdeep nudesâ€ , was concerning. â€œExamples like this show the seriousness of the issue and the need for legal action. â€œThese tools can lead to cyberbullying, harassment, and mental health impacts.â€

She explains that researchers who created fictional accounts pretending to be 13-year-olds and then watched what happened with their feeds over 30 minutes, found that within 2.6 minutes - about 150 seconds - those â€˜13-year-oldsâ€™ were being shown suicidal content and a lot about eating disorders and mental health. They were being shown this content every 39 seconds.
â€œSo very quickly, it sends kids to these videos that romanticise and encourage self-harm and depressive thinking, and thereâ€™s also just some really depraved content on there,â€ says Marsh.
A video going round a couple of years ago showed a young girl dancing, before cutting to a man being brutally murdered. â€œTiktok pulled it but millions of kids had seen it. And once you've seen stuff like that, you can't unsee it,â€ Marsh adds.
In another study, a group of teenagers were put in a room together and asked about social media. â€œA quarter of them said that they'd seen people being beheaded and things like thatâ€¦ thereâ€™s really dark stuff that I just don't think parents understand is on there.â€

Facebook's lucrative advertising business sits flush alongside its transformation from a digital hub of genuine social interaction to a chaotic landfill of misinformation and AI-generated freak shows.

Reference 4 - 1.39% Coverage

If Facebook is the blueprint in its current state, then that implication is illogical, dangerous and unfair. Social media platforms like Facebook can operate at their highly desirable scale by leveraging unmoderated user-generated content and, increasingly, vast amounts of fake news and AI-generated imagery to drive engagement. Their business models thrive on maximising interaction and data collection and prioritising viral content regardless of its accuracy or origin.

An increasing number of New Zealand students are being victimised by deepfake pornography, and legal grey area means help can be hard to find
Artificial Intelligence has gone bad in our classrooms. A new trend is emerging called pornographic deepfakes, created by students, of students. It's increasing. And it's devastating.

Reference 2 - 2.81% Coverage

Put simply, pornographic deepfakes are a form of online bullying using A.I.
How they work is simple: deepfakes create a sexual image of a person - in this case a student, normally female - doing or saying things they have not said or done.

The images were not real, but nevertheless disturbing.
When police searched the home of an Auckland man who had developed an addiction to illegal porn retrieved from the dark web, they found on his devices 145 objectionable computer-generated images along with 650 child sexual abuse images involving real children.
Among the images created with the help of artificial intelligence (AI) was a sexually explicit scene involving a deepfake of a pre-pubescent Harry Potter character and an unrelated scene involving adult beastiality.

Reference 2 - 1.64% Coverage

A search warrant was executed at his home days later, and authorities found images that included bestiality, defecation, rape and torture. The haul also included â€œhyper-realistic computer-generated videos of children being abusedâ€ , Simon Peterson, chief Customs officer for the Child Exploitation Operations Team, said in a statement.

New Zealand police are part of a global operation targeting AI-generated child sexual abuse material (CSAM).

Reference 2 - 7.45% Coverage

He said AI-generated abuse material was a growing issue for police around the world.
"Even when imagery doesn't depict 'real' victims, the material adds to an ecosystem that incites and glorifies the sexual abuse and harm of children.
"AI-generated child abuse material can be so realistic that resources are diverted from identifying real-life child victims, placing those children at ongoing risk of harm."
