However, in a more alarmist and possibly ironic study, the gaming site Slingo rates New Zealand as the third most vulnerable to a scenario where AI becomes the most dominant form of intelligence on Earth.
It said the country would face worrying implications for all facets of industry, including automation, copyright infringement and data security risks. The rating was based on New Zealand's relatively smaller proportion of young people, fewer internet users, and lack of cyber security.

But Gregory said the time for critical questions was now, including if people wanted the New Zealand Defence Force to serve alongside autonomous-weapon equipped militaries. "The stakes could not be higher," he said. "This technology has the capacity to accelerate the violence that's inflicted on the battlefield and amplify the potential for mistakes."

This will add big long-range drones to the four surveillance models the New Zealand Defence Force (NZDF) already uses. Some of the new drones will be nastier, but within limits, Defence Minister Judith Collins told Morning Report on Tuesday. "We are very clear though, we will not have what's called those drones that actually use AI to go around hunting people," Collins said. "No, that's not what we're going [sic]. "We're talking about things where it's drones to defend us against other drones."
