There has been concern about how fast AI is developing - even from its creators.

Reference 2 - 1.98% Coverage

In March 2023 more than 1000 tech leaders, including Elon Musk, signed an open letter calling for a pause in AI development, warning of profound risks to humanity from an arms race to develop powerful digital minds not even their creators could understand or control.

He offset my concerns about unbridled and uncritical enthusiasm about AI almost immediately by highlighting the obvious capitalism driving the “AI arms race”, plainly illustrating his statement that “big tech needs the next big thing” with a slide showing how revenue growth has fallen at Amazon, Microsoft and Apple over the last few years.

"This is a very disappointing development at the precise moment that we are seeing AI-equipped weapons being used on battlefields in various conflicts," said Gregory. "It's very disappointing to see the government seemingly abandon its efforts to regulate these weapons." MFAT told RNZ in May that "technological advancements in the areas of autonomy are moving quickly".

"The stakes could not be higher," he said. "This technology has the capacity to accelerate the violence that's inflicted on the battlefield and amplify the potential for mistakes."

AI is supercharging not just the race to develop non-lethal autonomous systems, such as in targeting, but potentially lethal ones, too, at a time when the UN is struggling to find consensus around international limits on killer robots

The race to lead AI has become a desperate hunt for the digital data needed to advance it. To obtain that data, companies such as OpenAI, Google, and Meta have cut corners, ignored corporate policies, and debated bending the law, according to the New York Times.

Reference 2 - 1.70% Coverage

"There's a strong incentive to just grab whatever you can and try to move quickly enough that by the time people start paying attention, you're too big and influential to meaningfully punish for any indiscretions you may have committed on your way to the top."

Australian researcher Mick Ryan - who has just returned from his fifth visit to Ukraine - warns that the rapid adaptation of war technology is "now occurring at a pace that I believe is largely incomprehensible to the majority of politicians and defence procurement bureaucrats in the west."

Reference 2 - 0.47% Coverage

These politicans and bureaucrats had to wake up and catch up, Ryan said.

CSIS used 400 scenarios and 60,000 questions in the first major benchmarking study of how generative AI approached international relations and foreign policy decisionmaking. "The results reveal a concerning trend," researchers said. "Some widely used AI models exhibit a marked bias toward escalation in crisis scenarios compared to others.
"This finding has serious strategic implications. If AI models systematically favour escalation, they could skew policy analysis toward more aggressive responses in conflict-prone situations, increasing the risk of miscalculation in high-stakes geopolitical environments."

Militaries had to sit up and take notice, he said. "Adaptation is central to learning about the enemy and improving the capacity of friendly forces to negate an adversary's advantages in

technology, tactics, people and generation of smart ideas and massed capability over time. "This occurs in war, but must start in peacetime."

Ministerial briefings state the country's position on military AI was that "we need to preserve access to technology relevant for our national security" but any new weapons should comply with international humanitarian law, an OIA response shows.

Reference 2 - 4.92% Coverage

"Given the US changes .... the value of supporting voluntary efforts on military use of AI - especially on autonomous weapon systems
(AWS) - and to ensure we are part of important discussions alongside partners, we recommend that New Zealand endorse the Political Declaration," the Defence Ministry told the Defence and Foreign Affairs ministers in February 2024.
"This position recognises that we need to preserve access to technology relevant for our national security and interoperability with our security partners, while also advocating for the agreement of new rules and limits on AWS.
"It remains in our national security interests to ensure that any new weapons fielded comply with international humanitarian law and relevant ethical standards."
