The big danger at the moment is in not being able to fact check where information comes from.
"If we can use AI that provides links, and we can click on the link and go and see where the information was retrieved from, then we're able to use our own sense of critical thinking to determine if it makes sense and it's from a reputable outfit," says Williamson.
"But if we're using AI tools that don't reference where they've got information from and we do not have the track record to trust them, then we need to take everything with a pinch of salt."

Reference 2 - 3.35% Coverage

In The Detail today, Williamson talks about the difference between 'black box' and 'white' or 'transparent box' AI. One arrives at a conclusion without leaving a trail, and the other can be taught to explain its thinking.

The Ministry of Social Development has developed guidelines for business rules, data-based algorithms and statistically or analytically derived patterns in machine learning or artificial intelligence, and spells out checks that are needed for transparency, oversight and to overcome bias. Bishop said similar safeguards would be in place for INZ's automated decisions, which were already enabled through legislation.
