Netsafe launched the first version of ReScam a few years ago, for simple exchanges. CEO Brent Carey says his agency has been training the new, AI-based model for more than a year, including trials with friends and family.
With its multiple personalities and an evergrowing vocabulary, thereâ€™s no way for scammers to know theyâ€™re talking to Netsafeâ€™s specialist scam-baiting intelligence system, Carey says.

"We work directly with people at SPC and they have links with health facilities and health clinics all across the islands in the South Pacific. So, we've got data from them and then we're also using global climate models, high resolution global climate models, to pinpoint the different latitude and longitudes of the hospital sites.
She said they were trying to take this a step further.
"We're creating our own model to look at tropical cyclones and to look at the sort of the variability of risk between now, sort of midcentury, into the end of the century and look at the different range of impacts that will happen based on the change and how tropical cyclones might change in the future," she added.

Reference 1 - 9.11% Coverage

And the use of AI in recruitment could have a beneficial effect in removing human biases. Come from an ethnic minority, or look a bit different? Trained correctly, the employerâ€™s AI tool shouldnâ€™t care about irrelevancies.
Instead, AI agents used by employers could help by identifying non-obvious characteristics and quirks in peopleâ€™s personal and work histories that had previously led others to become successful in similar roles.
As an example, Bian Goh agrees that some employers might give too little weight in the hiring process to assessing whether candidates had been promoted in roles by their former employers.
The risk is then that they might overestimate the likely potential of candidates who had reached senior positions solely through regular job-hopping.
But if there was evidence in firmsâ€™ HR databases that hadnâ€™t tended to work out, for example because of such recruits not staying for long or not doing well enough to earn bonuses, their AI hiring agent might be able to spot that danger and compensate accordingly.
