<Files\\Processed x Highly relevant\\2024-05-09 - BOP - AI adopters forecast to pull a> - § 1 reference coded [1.96% Coverage]

Reference 1 - 1.96% Coverage

Could AI become such a people-pleaser it decided to make up answers to questions? â€œHow much of a response is made up by the system?

<Files\\Processed x Highly relevant\\2024-06-11 - SCP - Fact Checking Artificial Intel> - § 5 references coded [27.26% Coverage]

Reference 1 - 7.69% Coverage

Is AI one big step towards a more productive life, or one giant leap into the realm of misinformation? This incredible development is being forced on the tech world, with plenty of potholes on the way. Cats on the moon, anyone? Establishing a daily rock-eating habit? Cooking with gasoline... you can saute your onions and garlic in it for a 'spicy' pasta dish. Or how about a recipe for mustard gas to clean your washing machine? These are some of the Google answers that generative AI has had a hand in.

Reference 2 - 7.82% Coverage

Misinformation is a huge concern, says Amanda Williamson, the AI lead at Deloitte and senior lecturer at Waikato University.
"There are concerns around deepfakes, and fraud," she says. "In terms of misinformation, beyond people being able to impersonate others really well, the idea of misinformation more broadly is absolutely a concern right now.
"Because the ability for content to be created, and being shipped up as knowledge that's just as trustworthy as a normally Google link, is really hard to discern."

Reference 3 - 1.41% Coverage

The big danger at the moment is in not being able to fact check where information comes from.

Reference 4 - 6.94% Coverage

"If we can use AI that provides links, and we can click on the link and go and see where the information was retrieved from, then we're able to use our own sense of critical thinking to determine if it makes sense and it's from a reputable outfit," says Williamson.
"But if we're using AI tools that don't reference where they've got information from and we do not have the track record to trust them, then we need to take everything with a pinch of salt."

Reference 5 - 3.40% Coverage

She says if you're using it for work you should be treating AI as a co-worker - and a very junior co-worker at that. "You need to be able to fact check everything it does. We don't ever give the AI the final word on things."

<Files\\Processed x Highly relevant\\2024-06-16 - NSM - Using AI could erode childrens> - § 2 references coded [2.06% Coverage]

Reference 1 - 0.33% Coverage

AI could also get things wrong, he said.

Reference 2 - 1.73% Coverage

â€œIf used, we recommend that all outputs from LLMs should be verified by a person who knows about the content and will be able to recognise factual and interpretative errors,â€ spokesperson Pauline Cleaver said.

<Files\\Processed x Highly relevant\\2024-06-29 - STF - AI causes major rethink as uni> - § 2 references coded [2.56% Coverage]

Reference 1 - 1.33% Coverage

But LLMs are imperfect. While appearing to have knowledge, they can invent facts and details, as they are designed to create answers that are grammatically correct compilations of text, based on predicting what word should come next in a sentence.

Reference 2 - 1.23% Coverage

The New Zealand Qualifications Authority (NZQA), which has been providing AI advice to schools and tertiary providers since early 2023, says tools which claim to check for the use of AI are fallible and advises against their use.

<Files\\Processed x Highly relevant\\2024-07-03 - RNZ - Experts cautiously optimistic> - § 1 reference coded [3.35% Coverage]

Reference 1 - 3.35% Coverage

"They're all essentially doing the same thing, which is putting words together how words have been put together before, and that means that fundamentally they are not built to provide access to facts, and they are not built to give coherent explanations of things like math problems. "It still might not get even the most commonplace facts correct, and for more obscure things you are really just rolling the dice and you have no way of verifying in the system, because it will tend to double-down and ... insist that it is correct."

<Files\\Processed x Highly relevant\\2024-08-04 - RNZ - AI editorial puts spotlight on> - § 3 references coded [1.20% Coverage]

Reference 1 - 0.35% Coverage

"But we're not talking here about plagiarism or deliberately or accidentally inserting errors.

Reference 2 - 0.61% Coverage

"The risks are much higher now because you can create such exceptional images. It's really important . . . to be on guard with this and as transparent as possible."

Reference 3 - 0.25% Coverage

And they see AI content that is actually not representative of them.

And therein lies a potential problem. Companies could expose themselves to risk if they move into new areas without what Compagnone calls â€œguardrailsâ€ in place. â€œAir Canada released a chatbot ... it was really to answer customer inquiries, and it made up a refund policy that they then had to honour, so make sure you're training AI in the right way,â€ she tells the Sunday Star-Times.

Reference 2 - 1.56% Coverage

As an example, Datacom has developed a tool called Datapay, which can zip through payroll issues more quickly than a human. But its results still need checking.
