Reference 1 - 16.99% Coverage

Fake explicit images of teenage students which appear to have been created using artificial intelligence have been circulating at a North Canterbury high school.
Rangiora High School principal Bruce Kearney said an assembly was held yesterday after staff became aware of the images being shared. Kearney reported the situation to police, who he said were investigating. At least 15 students, both boys and girls, had been targeted.
â€œEssentially what [the image creators] have done is they have put them through some sort of software programme so they [appear] naked. â€œThis is a serious incident, and we will be taking a serious approach to this.â€
Kearney said staff did not yet know who created the images, but said the school, which had more than 1500 students on its roll, was supporting those affected. â€œTalk about hurtful and damaging to those people involved. Your heart just goes right out to them. Itâ€™s just so wrong.â€

Reference 2 - 5.71% Coverage

Netsafe chief executive Brent Carey said AI which manipulated images to remove clothing, commonly referred to as â€œdeep nudesâ€ , was concerning. â€œExamples like this show the seriousness of the issue and the need for legal action. â€œThese tools can lead to cyberbullying, harassment, and mental health impacts.â€

Reference 1 - 7.78% Coverage

Chair of the Top of the South Secondary Principalsâ€™ Association, Motueka High School principal John Prestidge said schools were using existing teacher processes and assessment to inform students when it was OK to use AI and when it wasn't. Assessments were based largely around students explaining what they were doing and why, he said.
Teachers were heavily involved in the process of a studentâ€™s work, which helped ensure â€œwhat a student is presenting is actually coming out of a students' own understandingâ€ , Prestidge said.
â€œIt's not infallible, but there are processes that teachers use all the time that minimise the opportunity for a student to suddenly arrive with an assessment piece that they've generated through ChatGPT.â€
It had always been easy for a student to plagiarise, and AI was â€œjust a more sophisticated tool they had access toâ€ , which reinforced the importance of good teacher-student relationships, he said.

A Privacy Commission spokesperson said while technologies bring significant benefits to individuals and agencies, they also introduced new and novel privacy risks that need to be managed. Examples included leaking of personal information in AI outputs, impersonation and fraud, nonconsensual fake images, audio and video, and automated decisions based on incorrect information or biased processing.

<Files\\Processed x Highly relevant\\2024-06-18 - MWS - Online checks over-zealous> - § 5 references coded [24.06% Coverage]

Reference 1 - 6.05% Coverage

Some Massey University students fear the online monitoring system checking for AI-created content in course work is overzealous.
A student, who did not want to be named, said many of his peers had been accused of cheating recently by using artificial intelligence to write their work, and the use of the universityâ€™s monitoring tools had gone too far, picking up more cases this year.

Reference 2 - 3.79% Coverage

But the university says its system for detecting AI use in assignments only flagged it when there was a high level of confidence and this was part of the universityâ€™s work to ensure students were not producing AI-generated work as their own.

Reference 3 - 7.94% Coverage

Other students had also voiced their concerns on social media, with some saying their work had registered as having a high percentage of AI-generated content, even though they had done all the work themselves. Some were scared, angry or upset they were wasting time having to provide evidence to prove they did their own work, rather than focus on their exams.
Provost Professor Giselle Byrnes said the university valued academic integrity and understood they were working in a rapidly changing environment.

Reference 4 - 1.97% Coverage

Byrnes said the use of generative AI-created content by students without attribution was a concern for universities worldwide.

Reference 5 - 4.31% Coverage

The university recognised AI was everywhere and being able to use it ethically was a skill, but â€œfor a university qualification to be meaningful, we need to be confident that students understand the subject they are writing about and the skills we are seeking to developâ€ .

<Files\\Processed x Highly relevant\\2024-06-29 - STF - AI causes major rethink as uni> - § 6 references coded [24.62% Coverage]

Reference 1 - 4.52% Coverage

Generative AI is a remarkable tool that can write academic essays on command yet even as academics are treating assessments as a ticking AI timebomb, the anticipated tsunami of student shiftiness has yet to arrive. What has arrived is an educational reshuffle, with the tools used to better assess students, and better detect academic misconduct.
â€œGenerative AI tools represent an existential threat to traditional forms of assessment,â€ says Massey University provost Professor Giselle Byrnes.
â€œWeâ€™re seeing the suspected use of generative AI in written assignments here at Massey, and yet this is a worldwide problem. Universities around the world are in the throes of coming to terms with how we can ensure the integrity of assessment and how we redesign assessment, given that generative AI tools are developing really quickly.â

Reference 2 - 2.12% Coverage

They open multiple risks that already exist around cheating in potentially opening up a wider range of

students who may not see using AI as cheating, or who may not have had the money to use essay mill sites.
Since the advent of LLMs the University of Sydney has had a 1000% increase in serious academic cheating cases referred to the registrar; referrals, note, not cases of proved cheating.

Reference 3 - 0.94% Coverage

â€œThe knowledge teachers have of their students is the best way to identify work that is not a studentâ€™s own,â€ says Jann Marshall, NZQA deputy chief executive, assessment.

Reference 4 - 4.04% Coverage

All New Zealand universities contacted by the Sunday Star-Times reported student use of AI-tools outside the parameters they had set.
Just over a year ago a range of educational facilities held a symposium examining what good assessment could look like in an AI world, with ideas on designing assessments in ways that support learning and reduce academic integrity issues.
At Massey University, 85,000 pieces of work were put through AI detector Turnitin in just the first semester. Only assignments that raise the suspicions of academic staff are scanned. Very few proved to be cheating. Of the 85,000 submissions, 11,000 (13% or one in seven) had AI detection percentages between 21% and 100%, with only 2% found to be more than 90% AI generated.

Reference 5 - 3.60% Coverage

At the moment it's a process of education for teachers, as much as it is for students. We ask them to use human assessment first and foremost, looking for things that are not entirely natural, such as if you've got error-free writing, if you've got something that does not sound like a personal voice, something that sounds very different to other samples of the student's work, that uses highly generic language, factual inaccuracies, and changes in writing style; all these characteristics throw up red flags.
â€œAt Massey, we're trying to encourage teachers to apply a human overlay or judgement before they put an assignment through turnitin to check for matches.â€

Reference 6 - 9.40% Coverage

Other universities are using similar processes, with the University of Auckland incorporating digital technology to ensure the sanctity of its assessments.
â€œAmong our methods to detect AI use, our invigilated, online examinations use a specialised exam portal that records studentsâ€™ webcams and computer screens while they are sitting the exam,â€ a spokesperson says.
â€œStudents have been detected using Gen-AI in exams through these recordings, and these can provide conclusive evidence.â€
Auckland has had students successfully defend allegations of academic dishonesty, where they were able to show their working on an assignment and demonstrate their understanding of the answers.
â€œIn these cases, it was determined that, on the balance of probabilities, the work was most likely the studentsâ€™ own and not produced by Gen-AI.â€
Te Herenga Wakaâ€"Victoria University of Wellington has a working group to address the issues connected to AI in learning and teaching. Auckland University of Technology has a project to implement AI-related policy and procedures.
Otago and Waikato have for two years recorded academic misconduct in its reporting (e.g. plagiarism, collaboration, unauthorised artificial intelligence usage).
Of the 79 findings of academic misconduct at Otago in 2023, 24 were for unauthorised use of artificial intelligence.

Since January 2023 the University of Waikato has dealt with 96 formal complaints involving the inappropriate use of generative AI, of those 38 resulted in findings of no misconduct, while 58 complaints were upheld.
A University of Canterbury spokesperson said it had had both cases of AI-enhanced academic misconduct, and students able to prove they had used it within its guidelines.

â€œI'm not adverse to tech, but I can see the harm that it causes,â€ she says. â€œI've been doing a lot of work on academic integrity at the University of Auckland for a couple of years.

Reference 2 - 1.73% Coverage

â€œYou want to know that what it says on a studentâ€™s academic certificate is accurate, so that comes back to the integrity and the reputation of the universities,â€ she says.

Reference 3 - 1.97% Coverage

As well as making it tricky to determine the quality of a studentâ€™s knowledge, the use of AI tools to produce essays and coursework can put those who play by the academic rulebook at a disadvantage.

Reference 4 - 3.21% Coverage

â€œAll universities are trying to do things around both facilitating the use of generative-AI where appropriate by students, and also to prevent students from using generative-AI for some assessments,â€ she says. â€œThere are some very good practices of people making changes to their assessments however â€¦ not everyone has.

<Files\\Processed x Highly relevant\\2024-08-24 - RNZ - Why internet searches are serv> - § 3 references coded [12.87% Coverage]

Reference 1 - 3.40% Coverage

"If you go to Amazon and search for a reasonably popular book that you've read recently and I read - well, I'm still reading Rory Stewart's book Politics On The Edge, which is a sort of political best-seller in the UK - you search for that and you get Rory Stewart's books, and he's written a number," McLauchlan said.
"But you also get these quite strange results which have titles like Rory Stewart Book and Rory Stewart Political Career and they're presented as books... Rory Stewart Book you can purchase online for $7.89.

Reference 2 - 4.41% Coverage

"And if you look at the reviews, you'll see that there are only one or two and they're completely outraged because they have [received] a book that is not written by an ex-politician or a human. They're written by a generative AI, and they're basically just gibberish.
"They've taken the text of one of Stewart's books and rewritten it so that he can't sue for plagiarism and then sold it as an online text. And so it's presenting itself as something meaningful, but it's actually just generated algorithmically and it's completely meaningless - and that's the case for just about anything that's reasonably popular."
Even kids books are being plagiarised via computer, he said.

Reference 3 - 5.06% Coverage

"I was looking at celebrities - Donald Trump, Joe Rogan - and on TikTok and Instagram, you'll find these so-called 'stories' and they have they have deepfake voices of these people saying things. And you know, we've all been primed to think, 'Oh, the Russians are creating this, you know, deep fake technology to destroy our democracy.' But actually, it's not political content, it's not even content. It's just random gibberish in the voices of these celebrities. "And so what they're doing is they're creating vast volumes of this content as a form of search engine optimisation. So, whenever anything searches anything, you'll increasingly get AI slop... you can use these open-source models and just spin up a instance on a cloud computer and generate gigantic volumes of garbage."

Jill Creasy, 72, spotted the realistic-looking video advertisement on Facebook in July this year. In it, the Prime Minister purportedly urged pensioners to supplement their income by splurging on Bitcoin.

Reference 2 - 2.58% Coverage

However the video â€" along with others depicting TVNZ broadcaster Jenny May Clarkson and Deputy Prime Minister Winston Peters â€" were AI-generated deepfakes that weeks later sparked a public scam warning from the Financial Markets Authority.

Reference 3 - 0.83% Coverage

She reported the scam to police and TSB but her money could not be recovered.

<Files\\Processed x Highly relevant\\2024-10-19 - RNZ - Scam Facebook ads targeting me> - § 5 references coded [20.26% Coverage]

Reference 1 - 7.81% Coverage

Newstalk ZB's Mike Hosking ended his show one day in August up in arms about scammers on Facebook. They were using his name and image to sell junk or hoodwink people into giving away their financial information. "This is all rubbish. It's spam. It's nonsense," he said. Some of the ads in question said Hosking had "confirmed allegations". One said his producer had been forced to cut to commercials after he "dropped a bombshell". He was right. The ads are annoying. And false. But as his producer Glenn Hart admitted, they can be alluring to a vulnerable audience. "Certainly draws me in," he said. "The one that says 'Mike drops bombshell, producers forced to cut straight to commercial', that is definitely plausible." We can all get sucked in by a bogus headline, particularly if it's tailor-made to our tastes. Hosking is far from the only celebrity on the receiving end of these scam ads. They've proliferated across Facebook for months.

Reference 2 - 5.14% Coverage

Politicians are another common target.
Several ads report the death of Chris Hipkins - though on the bright side for the very-much-alive Labour leader, they also name him as one of our "most beloved New Zealanders" in defiance of his preferred prime minister polling. Many of these are sent from real Facebook accounts that have been hijacked.
The official Facebook page of former Speaker of the House and current High Commissioner to Ireland Trevor Mallard has been used by people in Vietnam, Bangladesh and a host of other countries to run more than 250 ads - including a bogus RNZ article about TVNZ's Hayley Holt.

Reference 3 - 4.41% Coverage

He says Meta has the resources to better moderate these ads, but it chooses not to employ enough real people to do the work.

"Facebook could hire someone with the ability to spot a fake ad and spot it before it gets run. They say they do an approval process before ads get placed but what that is is a mystery."
"The ones that really shock me are the ones that include AI videos of politicians. I've got videos of Chris Luxon, Chris Hipkins, Winston Peters. I've got AI videos of Ashley Bloomfield talking about health products."

Reference 4 - 1.85% Coverage

"They're ripping people off. People who are spending time reading them are being exposed to scams. Their data is being harvested. They're ripping media companies off as well - for RNZ they're using our brand and our people."

Reference 5 - 1.05% Coverage

It's a double whammy, a vicious cycle - and one that could be ramping up as AI makes these sorts of ads easier to mass produce.

<Files\\Processed x Highly relevant\\2024-11-05 - RNZ - Why AI wont ruin childrens edu> - § 2 references coded [5.68% Coverage]

RED FLAG: Metaâ€™s artificial people Speaking of Mark Zuckerbergâ€™s firm, perhaps the most bizarre expression of AI slop SO has been Meta admitting it created a series of fake, AI-generated users on its Instagram and Facebook platforms.
The accounts were all supposed to be deleted in September last year. But after Meta generative AI vice-president Connor Hayes bragged about the programme in a New Year Financial Times interview, users discovered that 28 of the AI â€œpeopleâ€ remained active â€" including â€œGrandpa Brianâ€ , â€œProud Black queer momma of 2 & truth-tellerâ€ Liv and the â€œPractical dating coachâ€ Carter. Th

Reference 2 - 1.81% Coverage

And according to CNN, â€œGrandpa Brianâ€ said he had been created by Meta in 2020 and said, referring to himself in the third person: â€œMeta tested my engaging persona quietly before expanding to other platforms. Two years of unsuspecting users like you shared hearts with fake Grandpa Brian â€" until now.â€

Reference 1 - 1.61% Coverage

â€œThe rise of artificial intelligence is altering the landscape of child harm,â€ the United Nations Interregional Crime and Justice Research Institute said in a 52-page report released in September.
â€œOne of the most pressing dangers facing the global child protection ecosystem is AIâ€™s effects on child sexual abuse material.â€

Reference 2 - 1.24% Coverage

One fear, he said, is that it would bog down investigations as it became more and more difficult to differentiate between AI and real-life imagery. While both were prosecutable, finding and helping sexual abuse victims would always be an important priority.

Reference 3 - 2.80% Coverage

One of the most concerning trends in AI image generation, Richards said, was â€œnudifyâ€ apps that take images of clothed people and generate deep-fake sexually explicit versions.
â€œ ... This serves as a timely reminder to parents about posting innocent images of their children online,â€ he warned. â€œItâ€™s important that privacy settings are appropriate and reviewed often, that you only share the images with people you know and trust as once on the internet, people with bad intentions can, with the use of AI technology, objectify your child for sexual gratification.â€

Reference 4 - 2.08% Coverage

In announcing the passage of the law, Attorney-General Mark Dreyfus described the sharing of such material as â€œa damaging and deeply distressing form of abuseâ€ .
â€œThis insidious behaviour can be a method of degrading, humiliating and dehumanising victims,â€ he explained. â€œSuch acts are overwhelmingly targeted towards women and girls, perpetuating harmful gender stereotypes and contributing to gender-based violence.â€

Malapoa College Principal Shem Simon said utilising artificial intelligence tools like Chat-GPT could blur the lines between authentic
student work and generated content.
Vanuatu Institute of Technology principal said at the time that it is a tool that can improve productivity, but educators need to remain vigilant in ensuring academic integrity.

<Files\\Processed x Highly relevant\\2025-02-07 - NZH - Woman loses $375k in Martin He> - § 2 references coded [5.95% Coverage]

Reference 1 - 2.16% Coverage

Awoman who devoted two years and poured more than $375,000 into what she thought was a romantic relationship with Kiwi actor Martin Henderson has found it was a scam after moving here to be with him.

Reference 2 - 3.79% Coverage

She had shared the trauma of her fatherâ€™s Alzheimerâ€™s diagnosis, her motherâ€™s stroke, and her eventual divorce after an 11-year relationship.

In return, she received voice messages in Hendersonâ€™s AI-doctored voice telling her she was loved and given promises they would be together soon. Peppered through it all were the requests for money.

<Files\\Processed x Highly relevant\\2025-02-27 - GHT - More victims of actor romance> - § 6 references coded [15.80% Coverage]

Reference 1 - 1.61% Coverage

More women have fallen victim to a Martin Henderson romance scam leaving them heartbroken and out of pocket by tens of thousands of dollars.

Reference 2 - 3.64% Coverage

Two women have contacted the Herald, after watching a video of Henderson last week warning people not to believe the scammers, saying they too had fallen victim to someone pretending to be the well-known Kiwi actor. Another woman says her friend is a victim but still believes she is in a relationship with Henderson.

Reference 3 - 1.77% Coverage

Henderson, in New Zealand filming season 5 of My Life is Murder, hit out at scammers and urged fans to cease all contact with anyone saying they were him.

Reference 4 - 1.69% Coverage

The scam is similar to one where AI-doctored images of Hollywood actor Brad Pitt in hospital were used to trick a French woman out of $1.5 million.

Reference 5 - 3.54% Coverage

Another woman based in Britain has revealed her friend had also been scammed but still believes she is speaking to the real Henderson.
â€œI have shown her the articles and tried to convince her but she just gets angry and said she is speaking to the real Martin Henderson. She wonâ€™t hear any different.â€

Reference 6 - 3.55% Coverage

In an interview with the Herald last week, Henderson described the scams as â€œsad and horrificâ€ and said his heart went out to the women scammed.
â€œItâ€™s not a nice feeling to know someone has used your face and image and goodwill with fans and manipulated that relationship for something so sinister.â€

The Qualifications Authority says it is pushing ahead with the use of AI for exam-marking, while raising doubts about its misuse by school students.

Reference 2 - 4.15% Coverage

Appearing before the Education and Workforce Select Committee for its annual review on Wednesday, NZQA officials told MPs that artificial intelligence created risks for the integrity of internal assessment, yet 80 percent of NCEA credits last year came from internal assessed work.

Reference 3 - 4.14% Coverage

"Now, if you think about the risks of AI-generated assessment in the internal context, you might hope for a different balance between internal and external, because one reason for external assessment is that it helps triangulate the results that are achieved internally," he said.

Reference 4 - 3.56% Coverage

"AI is clearly a challenge for the education system generally, and of course a huge opportunity, but insofar as it's a challenge that would lead you to ask, is 20 percent of final results from external sufficient in the current environment."

Reference 5 - 1.74% Coverage

RNZ last year reported some schools were changing the way they assessed students because of the threat of AI cheating.

<Files\\Processed x Highly relevant\\2025-04-24 - NZH - Australian senators warning to> - § 3 references coded [12.42% Coverage]

Reference 1 - 6.19% Coverage

Abhinav Dhall, associate professor of data science and AI at Melbourneâ€™s Monash University, said deepfake production is no longer reserved for highly skilled programmers or tech giants.
He said there are a lot of apps and open-source tools available, and â€œpretty much anyoneâ€ could use them to do things such as swapping a face in an image or generating a video from an image.

Reference 2 - 2.60% Coverage

Australia introduced legislation last year criminalising non-consensual pornographic deepfakes, but there is no law preventing the spread of political deepfakes.

Reference 3 - 3.62% Coverage

â€œA lot of people are taking their information now from social media channels and consuming facts extremely rapidly. â€œIn those circumstances the risk of a compelling short grab from a deepfake, I think itâ€™s very real.â€
