â€œThe fear that AI could control the government is understandable, but AI itself doesnâ€™t have the ability to control anything. It is a tool created and controlled by humans. However, if not managed properly, AI systems could potentially make decisions that significantly impact peopleâ€™s lives.â€ â€œThis is why itâ€™s crucial to have strong regulations, transparency, and oversight in place.â€

Reference 2 - 2.31% Coverage

A Privacy Commission spokesperson said while technologies bring significant benefits to individuals and agencies, they also introduced new and novel privacy risks that need to be managed. Examples included leaking of personal information in AI outputs, impersonation and fraud, nonconsensual fake images, audio and video, and automated decisions based on incorrect information or biased processing.
