However, in a more alarmist and possibly ironic study, the gaming site Slingo rates New Zealand as the third most vulnerable to a scenario where AI becomes the most dominant form of intelligence on Earth.
It said the country would face worrying implications for all facets of industry, including automation, copyright infringement and data security risks. The rating was based on New Zealand's relatively smaller proportion of young people, fewer internet users, and lack of cyber security.

<Files\\Processed x Highly relevant\\2024-06-17 - RDP - How much are councils, govt de> - § 1 reference coded [3.70% Coverage]

Reference 1 - 3.70% Coverage

Slow adoption of AI a disadvantage University of Waikato Artificial Intelligence Institute director Professor Albert Bifet said the government could be disadvantaged if councils were quicker to adopt AI. â€œCouncils often have more flexibility to try new technologies and can implement them quickly.â€ The government could miss out on improving efficiency and services.
â€œSlow adoption might lead to inconsistencies in AI use across different levels of government, causing inefficiencies and unequal service quality. Itâ€™s important for the government to adopt AI proactively to ensure consistent and high-quality public services.â€

Reference 1 - 0.80% Coverage

In the media and journalism business, conversations about its well-documented troubles often call for it to innovate in the face of disruption from global tech giants like Meta. Sometimes, the implication

seems to be that these companies provide a blueprint for innovation.

<Files\\Processed x Highly relevant\\2024-07-18 - TST - Report warns of barrier to rea> - § 4 references coded [15.25% Coverage]

Reference 1 - 1.88% Coverage

New Zealandâ€™s history of being slow to adopt new technologies could mean the country fails to realise the productivity and investment benefits of artificial intelligence, a new report says.

Reference 2 - 1.65% Coverage

However, New Zealandâ€™s traditionally slow take-up of new technology and low levels of investment in innovation â€œcould be a barrier to realising AIâ€™s benefitsâ€ .

Reference 3 - 3.76% Coverage

Written by Harry Nicholls and Udayan Mukherjee, the report outlines that AIâ€™s impact on employment and the labour market, and balancing â€œjob destructionâ€ with creation remained unclear.
â€œAIâ€™s disproportionate impact on higher-skilled tasks might mean employment in higher-skilled, advanced economies like New Zealand is more exposed to the impacts of AI,â€ the report outlined.

Reference 4 - 7.96% Coverage

But he believed New Zealand could solve a lot of its biggest headaches by adopting AI. Bifet said the technology could help businesses better navigate the economic challenges, and lift organisations out of strife faster than those that were not looking to implement it in a hurry.
â€œWe need to be very careful because AI is happening very fast and we donâ€™t want to be last to jump on board. We can be in a better position for this AI revolution, or we can be in a much worse situation. We should see how to use AI, but also how we should be developing AI,â€ said Bifet.
He urged the public and private sectors to not lag in adopting AI. â€œThis is this revolutionary. Like the internet that changed everything, but this time itâ€™s going to be much faster. Itâ€™s important to see how we can benefit off that.â€™â€™

Reference 1 - 2.09% Coverage

Tom Gruber, a founder behind AI-powered chatbot Siri â€" one of the first applications of mainstream AI â€" says the technology out in the world today largely automates jobs and tasks, but the next generation of AI is set to â€œaugmentâ€ tasks and allow for a lot more creative freedom.
G

Reference 2 - 2.42% Coverage

Gruber says there are wins to be had when adopting AI, but businesses should be using it with the aim to augment work rather than automate it.
â€œIf you in general choose AI projects that automate, it tends to lead to competition with humans, and if we choose AI projects that augment, it tends to lead to collaboration with humans.â€

Reference 3 - 3.15% Coverage

â€œIn some cases AI is going to automate jobs, there is no way around thisâ€ , but those types of jobs will be entry level and generally low-paying, he says. As that happens, higher-level roles will become more strategically important and valued.
AI-enabled job augmentation will be more common in the next five to 10 years, and will ultimately create a split in the workplace between jobs that can be automated and augmented, he says.

Reference 4 - 1.98% Coverage

â€œIt used to be that artificial intelligence was considered an opportunity in the market, and now itâ€™s a necessity, because itâ€™s become ubiquitous over a very short time. This means if youâ€™re not using AI, youâ€™re at a disadvantage because your competitors will be.â€

<Files\\Processed x Highly relevant\\2025-01-28 - RNZ - AI integration in education mu> - § 2 references coded [4.19% Coverage]

Reference 1 - 1.84% Coverage

"Education systems will need to adapt and prepare students for evolving job markets while ensuring that automation does not disproportionately impact already vulnerable communities.

Reference 2 - 2.35% Coverage

"Secondly, curricula should be developed to not only include technical literacy but also skills such as critical thinking, creativity, and ethical reasoning-skills that remain uniquely human and are less susceptible to automation."

Machines will take over more jobs at Immigration New Zealand under a multi-million dollar upgrade.

Reference 2 - 1.01% Coverage

It predicts savings through a reduction in staff - though the number of job losses is not shown - with estimated cuts of $344m over several years

Reference 3 - 1.53% Coverage

Automation has been a contentious subject for INZ, with officials suggesting it was a sensitive subject and academics concerned it could either bake human bias into decisions, or affect staff decisions through profiling.

<Files\\Processed x Highly relevant\\2025-04-04 - STF - AI wrote my explainer, now its> - § 5 references coded [18.59% Coverage]

Reference 1 - 1.35% Coverage

AI and large language models (LLMs) that can process huge amounts of data in a flash will undoubtedly remove some human jobs,

Reference 2 - 2.54% Coverage

ong the jobs likely to be reshaped is mine â€" along with retail and customer service (chatbots asking â€œcan I help you?â€), manual jobs in manufacturing and warehouses, and office work such as data entry, spreadsheets and bookkeeping.

Reference 3 - 4.04% Coverage

â€œIt will likely take several years for AI systems to develop the complex skills, judgement, and human

interaction capabilities required to fully replace experienced journalists. Over the next decade, we can expect AI to become increasingly integrated into the journalism industry, potentially changing the nature of many roles, but not necessarily replacing them entirely.â€

Reference 4 - 5.56% Coverage

Recent research paints a stark picture: AI capabilities are doubling every seven months, creating an unstoppable juggernaut of job displacement. By 2028, these silicon-brained marvels could be tackling month-long projects that once kept our best and brightest busy.
Here in Godzone, up to 46% of jobs could be on the chopping block over the next two decades. That's nearly half our workforce facing an uncertain future. But itâ€™s not all doom and gloom. Some reckon AI could boost our productivity by 1.5% annually.

Reference 5 - 5.10% Coverage

While Bifet says it is pessimistic to argue AI will widely wipe out jobs, there were parallels with what Rifkin said of the internet.
â€œMy main concern is that we are likely to have a divide between those who are using and developing AI and those who are not. As AI is somewhat delayed in NZ, we could be in trouble in the coming years, especially if our AI talent goes overseas due to a lack of opportunities here. In this context, you may be right to feel pessimistic.â€
