Graves pointed to Appleâ€™s famous 1984 ad introducing the Macintosh computer, which he said focused more on uplifting creativity and thinking outside of the box as a unique individual. In contrast, Graves added, â€œthis [new iPad] commercial says, â€˜no, weâ€™re going to take all the creativity in the world and use a hydraulic press to push it down into one device that everyone usesâ€™.â€

<Files\\Processed x Highly relevant\\2024-05-17 - TMH - Sony Music warns AI firms over> - § 3 references coded [18.94% Coverage]

Reference 1 - 3.32% Coverage

Sony Music has written to more than 700 artificial intelligence companies, accusing them of using its artists' content without permission, as tension builds between the creative and technology sectors.

Reference 2 - 2.94% Coverage

Sony said this was with a view to discussing licensing or partnership deals to pay for content, but it is understood that it could pursue legal action if companies do not comply.

Reference 3 - 12.67% Coverage

Everything from lyrics to images to compositions was protected, the label said, and unauthorised use deprived artists "of control over and appropriate compensation" for their work, and "infringes our intellectual property and other rights".
Sony will expand its list of AI companies that are in the scope of its ban, and has told online platforms and services that distribute and stream music digitally, such as Spotify, to make it "abundantly clear" to users that mining and training on its content is not permitted.
Generative AI models require vast amounts of data in order to train their technology in pattern recognition, which enables the creation of music, images and text mimicking human-created material, as made by the likes of ChatGPT and StabilityAI.

<Files\\Processed x Highly relevant\\2024-05-22 - RNZ - AI expected to supercharge pro> - § 1 reference coded [8.72% Coverage]

Reference 1 - 8.72% Coverage

However, in a more alarmist and possibly ironic study, the gaming site Slingo rates New Zealand as the third most vulnerable to a scenario where AI becomes the most dominant form of intelligence on Earth.
It said the country would face worrying implications for all facets of industry, including automation, copyright infringement and data security risks. The rating was based on New Zealand's relatively smaller proportion of young people, fewer internet users, and lack of cyber security.

â€œNot long after its public release, ChatGPT was asked to write a song in the style of Nick Cave. It went viral.
â€œCave, after studying the lyrics, came out and said that ChatGPT was the commodification of the human spirit and â€˜a grotesque mockery of what it is to be humanâ€™.

<Files\\Processed x Highly relevant\\2024-07-08 - SPN - Fake news, AI slop and little> - § 5 references coded [5.68% Coverage]

Reference 1 - 1.04% Coverage

If community building, people power and closeness come from bonding over an infinite number of AI-generated images of airline hostesses posing with Jesus, soft porn versions of women in the army, legless soldiers and trucks full of babies, then Facebook is on track. If the company has something more authentic and human in mind, it’s failing miserably.

Reference 2 - 1.06% Coverage

Controlled by an algorithm that is utterly opaque and dominated by either advertising or content the algorithm deems engaging, the number of recommended posts in your newsfeed (posts from pages, groups or people you don’t follow) has doubled since 2022. According to the researchers, Facebook is also actively recommending AI content, or slop, into users’ feeds.

Reference 3 - 0.54% Coverage

My newsfeed these days largely consists of three things: posts from the groups I’m in, ads, and now, the plague-like sprawl of fake posts, bot-farmed engagement and meaningless imagery.

Reference 4 - 0.84% Coverage

Meta has done exactly that in Canada and may follow suit in Australia, where similar legislation exists. It makes you wonder what, of any quality or utility, will be left in our newsfeeds if friends, family, and news are largely gone, and AI slop and fake news continue to proliferate.

Reference 5 - 2.19% Coverage

Despite that granularity of experience, there is a growing consensus that Facebook is something of a wasteland, a beast that has grown billions of limbs that, at various points, have turned gangrenous, dropped off, and now haphazardly fly around hitting you in the face when you visit. As 404 Media's Jason Koebler told The Guardian recently, the proliferation of AI "art" is representative of the "zombie internet" where Facebook is now "a mix of bots, humans and accounts that were once humans but aren't any more mix together to form a disastrous website where there is little social connection at all." The scale of junk cluttering the place seems like it can't be thwarted or reigned in and is now beyond cleaning up, control or regulation.

Reference 1 - 3.14% Coverage

â€œThe emergence of new forms of generative AI technology has been striking, perhaps most of all because it appears that many of the recent tools have been able to demonstrate rapid advances in higher-skill and creative tasks that were previously imagined to be harder to replicate, and so thought to be uniquely â€˜humanâ€™

<Files\\Processed x Highly relevant\\2024-08-01 - RNZ - Can only damage trust - NZME u> - § 2 references coded [10.82% Coverage]

Reference 1 - 1.85% Coverage

A statement from NZME editor-in-chief Murray Kirkness said AI was used in a way that fell short of its standards and "more journalistic rigour would have been beneficial".

Reference 2 - 8.97% Coverage

Treadwell said the role of the editorial in any major news publication was to be an opinion leader.
"I don't know how many of your readers have actually gone back to have a look at the editorial that the Herald published, but it was sort of a generalist roundup of the arguments for and against Reiko Ioane at centre in the All Blacks back line - not a world-shattering issue, but a really good example of how AI doesn't really, can't really do what an editorial should do, which is to take a position on something.
"If you ask it to take a position, it will, and if you ask it to take another position, it will take that position.
"What is lacking here, even if you ask [AI] to take positions, is the original argument we would look to our senior journalists to put into the public dominion for us about important issues."

<Files\\Processed x Highly relevant\\2024-08-03 - RNZ - The huge playground of AI musi> - § 2 references coded [10.24% Coverage]

Reference 1 - 1.41% Coverage

Music created by artificial intelligence is getting better and better, and musicians are worried.

Reference 2 - 8.83% Coverage

But there are also downfalls. At the forefront are concerns around intellectual property and copyright issues. "Copyright law has just not been set up to account for this particular situation," Bown says.
"What the AI systems generate may very often sound very similar to something you've heard before, but not identical and it may be really blatantly in the style of a certain musician.
"The question is actually whether the AI companies have broken any law by gathering all of that data in the first place and feeding it into their model. It's hard to really pin down exactly what law they've broken."

<Files\\Processed x Highly relevant\\2024-08-04 - RNZ - AI editorial puts spotlight on> - § 2 references coded [1.13% Coverage]

Reference 2 - 0.79% Coverage

"If this is the voice of the paper, but it's actually being generated by AI... who's the voice? Where's it coming from? I am paying for it - but for AI to write it? That just doesn't seem like the value exchange."

<Files\\Processed x Highly relevant\\2024-08-05 - TDN - AI helped write this story abo> - § 1 reference coded [4.35% Coverage]

Reference 1 - 4.35% Coverage

It was not, I would like to point out, the story as I would have told it.
It was essentially a reordering and distillation of Flitterâ€™s quotes without any other context, humour, heart or other difficult to describe qualities that a journalist might be conceited enough to think they include in their stories for the benefit of their readers.

<Files\\Processed x Highly relevant\\2024-08-19 - RNZ - AI to deal $570m blow to Austr> - § 4 references coded [29.23% Coverage]

Reference 1 - 2.14% Coverage

New Zealand and Australian musicians are set to lose out on NZ$570 million over the past few years due to generative AI, a new report predicts

Reference 2 - 15.89% Coverage

By 2028, the survey found, 23 percent of music creators' revenues would be at risk due to AI, leading to losses of more than half a billion dollars
While 38 percent of respondents were already using AI in their work and 54 percent agreed that AI could assist the human creative process, 82 percent of music creators were concerned that its use

could lead to them no longer being able to make a living from their work.
More than three quarters of Māori members surveyed - 76 percent - believed that AI could lead to an increase in cultural appropriation. APRA AMCOS manakura puoro Māori Dame Hinewehi Mohi said unregulated AI technology was a "particular threat" to Māori music.
"The potential for AI to lead to cultural misappropriation is massive. Maintaining the cultural integrity of Māori musical traditions and taonga puoro is important to our Māori members."
The vast majority of members surveyed were concerned about the lack of legislation around AI in music, and in particular the need to credit artists and pay them fairly for their work.

Reference 3 - 6.19% Coverage

However, governments needed to put policies in place "to ensure that everyone is given the adequate credit, consent and fair remuneration for any works being used in AI platforms", he said. "If the use of AI is unregulated and unlicensed it will be economically devastating. Creators pour their hearts and souls into their work, yet they're facing a reality of seeing their creations exploited by AI platforms."

Reference 4 - 5.01% Coverage

The group's New Zealand head Anthony Healey said while music had been a digital business for some time, it was a "human experience" at its heart.
"While everyone is amazed at the possibility of AI - right now the technology is being built on the backs of creators. It is only right that they be recognised and share in its future."

<Files\\Processed x Highly relevant\\2024-08-23 - PST - AI could threaten $572m of NZ> - § 6 references coded [19.09% Coverage]

Reference 1 - 2.73% Coverage

AI could have a potentially catastrophic impact on Australian and Kiwi musicians, and the lack of legislation is â€œleaving creators behindâ€ , a major, first of its kind report published this week by music rights management organisation APRA AMCOS found.

Reference 2 - 3.23% Coverage

The Government has found itself in a quagmire over generative AI as it relates to art, walking a tightrope between industry heads who donâ€™t want innovation to be stifled with regulation missteps, and creatives who express grave concerns about copyright breaches and the technology taking their jobs.

Reference 3 - 2.34% Coverage

The APRA AMCOS report found that MÄ ori musicians were concerned about increased cultural appropriation, and that by 2028, almost a quarter of artistsâ€™ revenues could be at risk due to AI to the tune of $572 million.

Reference 4 - 6.24% Coverage

Overseas, several lawsuits against major AI companies were ongoing after artists across fields as diverse as music, visual art, screen and literature claimed enormous quantities of their IP was used to train the technology without their knowledge, and without compensation.
Collective licensing schemes have since popped up for billion-dollar AI businesses to seek permission before using IP â€" but an unquantifiable number of images, music, videos and other data has already

been infringed at creatorsâ€™ expense. Irvine was hopeful local licensing solutions would be developed.

Reference 5 - 1.55% Coverage

The problem with AI and art was that the technology relied on algorithms, not the uniqueness that was the hallmark of much great art, McKay said.

Reference 6 - 3.00% Coverage

â€œWeâ€™d encourage government always to protect the rights of creators themselves, because itâ€™s on their backs that all this technology is built. You canâ€™t have generative AI without the generations of data that have gone in to teach the AI how to do something,â€ Healey said
