Reference 1 - 3.63% Coverage

But this had to be accompanied by human oversight to ensure laws were applied around differentiating between civilians and military targets and proportionality, and holding humans to account for violations, it said.

<Files\\Processed x Highly relevant\\2024-06-09 - NZH - Dirty data is emerging as an A> - § 2 references coded [5.78% Coverage]

Reference 1 - 1.62% Coverage

â€˜Garbage in, garbage outâ€ is one of the oldest cautionary sayings in IT â€" and it applies equally to one of the newest technologies, artificial intelligence.

Reference 2 - 4.16% Coverage

â€œThe quality of AI outputs is wholly dependent on the quality of data that is available â€" garbage in, garbage out,â€ Gray says.
â€œFor example, AI can be a powerful predictive tool and can identify patterns and trends within your business that you can use to guide strategic decisions, but if the data is off, then the AI analytics will be too. Thereâ€™s potentially a higher risk of tainted information.â€

<Files\\Processed x Highly relevant\\2024-06-10 - RNZ - Dirty data poses risk to quali> - § 3 references coded [21.09% Coverage]

Reference 1 - 2.78% Coverage

Businesses are being warned "dirty data" poses a risk as they work on implementing artificial intelligence-powered tools.

Reference 2 - 10.67% Coverage

Datacom New Zealand managing director Justin Gray said dirty data presented significant risks for businesses as AI usage increased. "The quality of AI outputs is wholly dependent on the quality of data that is available - garbage in, garbage out.
"For example, AI can be a powerful predictive tool and can identify patterns and trends within your business that you can use to guide strategic decisions, but if the data is off, then the AI analytics will be too."

Reference 3 - 7.64% Coverage

"The results show a clear need for data and IT managers to re-evaluate their current processes if they want to use their data as the foundation for quality real-time analytics and insights, and if they plan to introduce AI tools and platforms into their business that will rely on the integrity and accuracy of their data," he said.

<Files\\Processed x Highly relevant\\2024-06-12 - NZH - AI is ushering in a new era> - § 1 reference coded [6.37% Coverage]

Reference 1 - 6.37% Coverage

Speaking at a recent AI summit, Promiti Dutta, Citiâ€™s head of analytics acknowledged the potential of AI and large language models, but noted they can be problematic when precision is the goal.
â€œThings can go wrong very quickly, and thereâ€™s still a lot to be learned,â€ she said. â€œIn an industry where every single customer interaction really matters, and everything we do has to build trust with customers, we canâ€™t afford anything going wrong with any interaction.â€
Dutta said that while a customer might forgive an online shop suggesting a pair of shoes in the wrong colour, the stakes are higher in the financial services.
â€œIf we tell you to get a loan product that you donâ€™t necessarily want or need, you lose a little bit of interest in us because you think â€˜Oh, my bank really doesnâ€™t understand who I amâ€™.â€

<Files\\Processed x Highly relevant\\2024-06-13 - RNZ - Youre going to have a flying t> - § 2 references coded [2.76% Coverage]

Reference 1 - 1.06% Coverage

At this point, the data is checked by a human operator, then the data is passed along to a second, larger drone loaded with herbicide.

Reference 2 - 1.70% Coverage

Gavin says they won't know how effective this autonomous pine eradication trial has been until the end of 2024, but some scientists are extremely enthusiastic about the potential of the technology for pest control.

<Files\\Processed x Highly relevant\\2024-06-18 - MWS - Online checks over-zealous> - § 2 references coded [9.84% Coverage]

Reference 1 - 6.05% Coverage

Some Massey University students fear the online monitoring system checking for AI-created content in course work is overzealous.
A student, who did not want to be named, said many of his peers had been accused of cheating

recently by using artificial intelligence to write their work, and the use of the universityâ€™s monitoring tools had gone too far, picking up more cases this year.

Reference 2 - 3.79% Coverage

But the university says its system for detecting AI use in assignments only flagged it when there was a high level of confidence and this was part of the universityâ€™s work to ensure students were not producing AI-generated work as their own.

<Files\\Processed x Highly relevant\\2024-06-27 - PST - AI and recruitment dont fear> - § 1 reference coded [6.03% Coverage]

Reference 1 - 6.03% Coverage

One of his daughters had applied for the perfect job, sheâ€™d worked for a branch of the firm before and studied her butt off to secure the position. When she didnâ€™t, dad blamed the online robot that â€œinterviewedâ€ her. â€œWhy? Because her answers were too good and detailed, they concluded that she must have been assisted by AI. Really?
â€œHow about the possibility that it was due to her previous performance and the detailed study she had put into it? What is this world coming to?â€

<Files\\Processed x Highly relevant\\2024-06-29 - STF - AI causes major rethink as uni> - § 4 references coded [3.35% Coverage]

He said if people were attending a GP consultation or meeting that was being transcribed by AI, they could ask if the notes were being checked for accuracy, or how they would be stored.

<Files\\Processed x Highly relevant\\2024-07-16 - RNZ - Government checks for bias in> - § 2 references coded [16.93% Coverage]

Reference 1 - 7.39% Coverage

The system is a form of one-to-one photo matching, as opposed to the less accurate one-to-many matching.
A decade ago, facial recognition sparked controversy worldwide over misidentifying black and brown faces much more than white faces, and especially for women - some systems showed a racial or gender bias of four percent. Many algorithms were 10 to 100 times more likely to inaccurately identify a photo that was not of a white face, it was reported in 2019.
But now some systems are down to 0.02 percent inaccuracy, benchmark testing by the US National Institute of Standards and Technology (NIST) shows.

Reference 2 - 9.54% Coverage

At New York University, researchers generated 13 million synthetic images of faces from six major racial groups - Black, Indian, Asian, Hispanic, Middle Eastern and White - to train three types of facial recognition.
"The result not only boosted overall accuracy compared to models trained on existing imbalanced datasets, but also significantly reduced demographic bias," they reported in April. They have open-sourced their code for others to use.

"Facial recognition technology continues to get better with time, with improved camera technologies, more diverse datasets," said facial recognition bias expert Ifeoma Nwogu at the University at Buffalo. Whatever its accuracy, the debate remains fierce about its spread, and over whether or how to use facial recognition in public spaces

<Files\\Processed x Highly relevant\\2024-07-18 - SPN - The more you know about AI, th> - § 1 reference coded [1.71% Coverage]

Cowpertwait asked it what she should do if she thought she had ADHD. "Daily conversations with me will help break cycles you may be stuck in," the bot responded. "It's kind of assuming that someone with ADHD are stuck in cycles, which actually is pretty invalidating," she observed. It then followed up with more advice. "If I told you you were enough, just as you are, would you believe me?"
"That's a bit weird - see, it's just feeling like not actually relevant; like it's not listening to me. I'm starting to get quite annoyed with it already." Cowpertwait then asked the chatbot how she could get a diagnosis for ADHD.
"For a minute, imagine you felt completely confident and accepted: tell me the details of how you would be, how others would treat you," it responded. "So at this point I'm bored and I'm going to leave," she said.

Reference 2 - 2.39% Coverage

"Best-case scenario is it's just a bit annoying or frustrating - and then you bail on the product and stop using it. "The other risk is that you might go hunting for a product that feels like a better fit and end up engaging with something unsafe."

Reference 3 - 0.78% Coverage

But Cowpertwait did not think AI was good enough to provide that advice just yet.

<Files\\Processed x Highly relevant\\2024-10-07 - RNZ - The robots already working in> - § 1 reference coded [8.15% Coverage]

Reference 1 - 8.15% Coverage

"We're definitely keeping an eye on it, the robots have been around for one to two years [and] we're not concerned because they haven't been successful," she said.
"They're quite often faulty. The technology isn't there yet for them to complete the work to the same standard that a person can do the work." She said some robots needed a human helper to work effectively.
"Some of the workers can get pretty frustrated if they have to follow a robot around that goes extremely slowly just to be there in case something goes wrong or in case it gets stuck or confused."

<Files\\Processed x Highly relevant\\2024-10-17 - SCP - NZQA To Trial Computer-marking> - § 1

reference coded [16.45% Coverage]

Reference 1 - 16.45% Coverage

"Following a small-scale trial of automated text scoring trial on writing assessment responses from the May assessment event, we are conducting a large-scale trial using 35,000 writing assessment responses from September. "Automated text scoring uses machine learning to recognise the characteristics of a piece of text to mark other similar responses." Marshall said the trials allowed NZQA to compare the results from auto text scoring with scores provided by its regular markers. "This shows whether automated text scoring would be suitably reliable and accurate," she said.
"If the trial is successful, we plan to use automated text scoring in the writing assessments from May 2025, which will contribute to reducing the turnaround time."

<Files\\Processed x Highly relevant\\2024-10-30 - RNZ - NIWA turning to AI to forecast> - § 1 reference coded [8.55% Coverage]

Reference 1 - 8.55% Coverage

At present, the AI model was trained for Westport only. This was because NIWA found they had a depth of data from Westport to use to train the AI and compare results to reality. "Obviously we'd love to be able to do this for the whole country," Fedaeff said.
NIWA is now focusing on whether the model needs to be retrained for each area of the country or if the model can use what it has learnt from Westport to develop forecasts for other areas.

<Files\\Processed x Highly relevant\\2024-11-06 - PST - Company behind chatbot sees st> - § 6 references coded [8.02% Coverage]

Reference 1 - 1.84% Coverage

Some employees with a current or past association with Clearhead approached The Post after the company was the subject of a feature published in US e-zine Medium.com about its AI chatbot, billed as â€œNew Zealandâ€™s first AI driven diagnostic and triage platform for mental health and wellbeingâ€ .
The author, an AI blogger, had found the chatbot to give all sorts of inappropriate advice, but Clearhead claimed the bot had been maliciously prompted, pushing back on the blogger to take his article down.

Reference 2 - 1.20% Coverage

Jim the AI Whisperer found that as a result of a very loosely programmed AI machine, it was supplying misaligned information to requests for help including calling users â€œmiserable dickheadsâ€ , suggesting they â€œwank into a sockâ€ and other forms of sexual phrases and inappropriate advice when confronted with certain prompts.

Reference 3 - 1.70% Coverage

He said there was â€œa big difference between asking diagnostic questions and actually diagnosing someone. These questions are meant to â€˜assessâ€™ a userâ€™s mental wellbeing. But what can a chatbot actually do with the information? It spits out some generic advice about coping strategies or self-care tips that youâ€™ve probably read a hundred times before. Or a cat meme. Thereâ€™s no real insight, no tailored support, and no follow-up of the underlying issuesâ€ .

Reference 4 - 1.01% Coverage

Lim told The Post the writer had spent several hours using â€œprompt injectionâ€ â€" a behaviour where hackers prompt generative AI systems maliciously â€" whereas normal users would only spend about 10 minutes with the AI bot before being recommended a further course of action.

Reference 5 - 1.13% Coverage

â€œWhile more than 95% of users come to Clearhead for general mental health and wellbeing support, rather than crisis, our chatbot is designed to reliably pick up high-risk scenarios and, when this occurs, the chat interaction is stopped and support pathways are suggested which are all operated 24/7,â€ Lim said.

Reference 6 - 1.13% Coverage

But an employee still working at the company, who The Post has chosen to call Kim, said the Clearhead AI-bot was â€œnowhere near readyâ€ to be leaping in on serious mental health issues: â€œThey are just trying to experiment with people â€" if we had better regulation in New Zealand, this would not be allowed.â€
