Name: 1.1 Speed and Scalability

<Files\\Processed x Highly relevant\\2024-05-27 - RNZ - New Zealand continues to call> - § 1 reference coded [1.91% Coverage]

Reference 1 - 1.91% Coverage

"AI gives users significant advantages, including greater speed, efficiency, accuracy and situational awareness."

<Files\\Processed x Highly relevant\\2024-06-10 - RNZ - Dirty data poses risk to quali> - § 1 reference coded [7.64% Coverage]

Reference 1 - 7.64% Coverage

"The results show a clear need for data and IT managers to re-evaluate their current processes if they want to use their data as the foundation for quality real-time analytics and insights, and if they plan to introduce AI tools and platforms into their business that will rely on the integrity and accuracy of their data," he said.

<Files\\Processed x Highly relevant\\2024-06-12 - NZH - AI is ushering in a new era> - § 3 references coded [9.00% Coverage]

Reference 1 - 1.15% Coverage

The most obvious example of AI in the financial industry is the ability it brings to rapidly process and extract insights from enormous amounts of data.

Reference 2 - 2.67% Coverage

Given AIâ€™s ability to quickly identify patterns and anomalies in data, it can process vast amounts of transactions than would be possible for humans to review and spot potential fraud with greater speed and accuracy. The ability to process data in real-time is critical in mitigating losses and preventing fraudulent transactions from being completed.

Reference 3 - 5.18% Coverage

Later this year, Mastercard will launch its generative AI model that will help banks improve their assessment of transactions. Mastercard says its AI enhancement, which assesses the relationships between multiple entities surrounding a transaction to determine its risk, will boost fraud detection rates on average by 20 per cent and as high as 300 per cent in some instances.
The precision of the solution â€" achieved by scanning potential points of sale in real time â€" has been shown in our own analysis to not only increase accuracy, but also reduce the number of false positives by more than 85 per cent,â€ says Mastercardâ€™s president of cyber and intelligence, Ajay Bhalla.

<Files\\Processed x Highly relevant\\2024-06-13 - NZH - Smartest teen now runs AI star> - § 1 reference coded [0.94% Coverage]

Reference 1 - 0.94% Coverage

He promises â€œa viral video within minutesâ€ , whether youâ€™re a solo creator or a brand.

<Files\\Processed x Highly relevant\\2024-06-21 - HBT - AI boost for farm productivity> - § 2 references coded [8.68% Coverage]

Reference 1 - 5.91% Coverage

â€œCows behave in some quite odd ways,â€ Morris said. â€œSometimes they push each other through the race, sometimes they run quite fast. Because weâ€™re monitoring in real time, we can really accurately apply the teat spray.â€
The system uses a high-mounted camera that observes cattle movement in real time and uses that information to decide when to apply the spray. â€œThe camera above is to keep it clear of weather and other potential obstructions,â€ said Johnson. â€œThis is a crucial part of machine vision to keep the lens clear, so that you can detect the cow.
â€

Reference 2 - 2.77% Coverage

â€œIâ€™ve been working on this for about two years now and in partnership [with GEA] for about a year. The difficult parts are around making the real-time machine vision cheap and reliable and all the software in behind that. Itâ€™s been a huge task to get that together.

<Files\\Processed x Highly relevant\\2024-06-27 - PST - AI and recruitment dont fear> - § 1 reference coded [0.72% Coverage]

An extra tool in the armoury was the addition of new machine-learning (AI) technology cameras, called â€œDoC AI CAMâ€ , that tracked, identified and sent real-time alerts regarding the rat to the eradication team.
â€œWe used a combination of standard trail cameras and AI cameras that gave us important and surprising information about the ratâ€™s behaviour, routes and favourite locations,â€ said DoC island biosecurity adviser Claire Warren.
â€œ

<Files\\Processed x Highly relevant\\2024-10-20 - WHC - AI models can forecast flu num> - § 1 reference coded [2.79% Coverage]

Reference 1 - 2.79% Coverage

The University of Aucklandâ€™s Dr Steffen Albrecht said these machine-learning tools could crunch entire years of variable hospital data at once to reveal useful statistical patterns.

<Files\\Processed x Highly relevant\\2024-10-30 - RNZ - NIWA turning to AI to forecast> - § 2 references coded [12.14% Coverage]

Reference 1 - 8.70% Coverage

The National Institute of Water and Atmospheric Research has developed an AI model which can forecast flooding within minutes.
NIWA manager Nava Fedaeff said staff currently used another form of physical modelling to predict flooding, but this take 24 hours to develop forecasts. "By the time that time is done, those areas are probably already flooded. So, it's too long," Fedaeff said. The new machine learning technology can be leveraged to save time.

Reference 2 - 3.44% Coverage

"NIWA's trying to stay at the front edge of that science and we're always looking at ways we can leverage the science and technology to make things either faster or more accurate."

<Files\\Processed x Highly relevant\\2024-11-03 - WHC - The hidden risks of coastal fl> - § 2

references coded [6.41% Coverage]

Reference 1 - 2.67% Coverage

Their study, published in the journal Risk Analysis, comes as National Institute of Water and Atmospheric Research (Niwa) scientists are using cutting-edge artificial intelligence (AI) to forecast flood inundation much quicker than current models.

Reference 2 - 3.74% Coverage

Ahead of intense storms, forecasters and agencies typically turn to physical models which predict impacts based on physics-based calculations like rainfall and river flows. While such models can take as long as 24 hours to run, the Niwa scientistsâ€™ new project has found using machine-learning can turn out detailed maps in a matter of minutes.
