<Files\\Processed x Highly relevant\\2024-06-13 - NZH - Smartest teen now runs AI star> - § 4 references coded [20.28% Coverage]

Reference 1 - 3.62% Coverage

Fast forward to 2024 and Singh, now based in New York, is co-founder and chief executive of Unfaze.ai â€" an artificial intelligence startup. Unfaze takes your conversational-language text prompts, and pics you upload, then turns them into a short-form promotional video to post on TikTok or YouTube to generate organic traffic, or serve as a paid ad.

Reference 2 - 2.73% Coverage

The video service spans from a free, watermarked version that includes five minutes of content, then goes up in tiers to a $449 per month full-blooded plan that includes up to 1000 minutes of video. Singh pitches it as cheaper than roping in an agency. He says the

Reference 3 - 4.04% Coverage

â€œWith traditional tools, you have to think of an idea, write a script, collate all the images and video snippets and then decide how to bring them together. Alternatively, now you could just upload your product image, tell AI your idea, press a button and have it generate one or multiple versions of the video and even automatically schedule and post them to your social media accounts.â€

Reference 4 - 9.89% Coverage

He added: â€œWith apps like TikTok, the model content allows businesses to post content that can organically expand its reach â€" which means that there is no additional cost each time someone views or clicks on the video. Under this model, the cost of a campaign is centred in the production of each piece of content. To produce an effective result requires multiple different versions to be tested and even then the video canâ€™t be reused indefinitely.
â€œBut when we use AI to remove this constraint, it allows even very small businesses with low budgets to drive organic traffic efficiently and potentially expose themselves to a global audience.â€
Unfaze is getting closer to the production of AI-generated videos that are indistinguishable from manually created content, Singh said. â€œThis is really the Holy Grail of video creation and with the speed at which AI is evolving, we expect to reach this point within a matter of months, not years.â€

A gym circuit at The Tanneryâ€™s Well Studios is operating the countryâ€™s only Technogym Biocircuit, allowing gym-goers to have their workout programme customised to their body and needs through a smart AI system.
The Well Studios owner and personal trainer Jen Rice said the system was a game changer for the gym and for its clients, delivering 30% faster results than traditional manual equipment.
â€

Reference 2 - 1.49% Coverage

Data showed the AI-generated equipment gave 30% greater results and was â€œfaster in terms of what you want to achieveâ€ .

Reference 3 - 6.98% Coverage

Rice said it could tell if someone had hit their target 80% of the time; or if they had increased the weight, it might say they had reached 110% compliance.
â€œYour goal is to hit 95% compliance or higher. If you do two workouts in a week and get 95% compliance or higher it asks you if youâ€™d like to level up because youâ€™ve done really well this week. When you next scan in, it puts the weight up automatically by 5%.
â€œThatâ€™s how you get those results faster, youâ€™re constantly being pushed that little bit more. It is the future [of gym workouts].â€

Tom Gruber, a founder behind AI-powered chatbot Siri â€" one of the first applications of mainstream AI â€" says the technology out in the world today largely automates jobs and tasks, but the next generation of AI is set to â€œaugmentâ€ tasks and allow for a lot more creative freedom.

Reference 2 - 2.40% Coverage

Gruber believes AGI will allow users to augment creativity, but on the flip side, it will also be responsible for disturbing content and deep fakes. â€œThe disturbing side of this technology means that the same technology that can help us make pretty pictures can also make fake news and all kinds of false and misleading content.
â

Reference 3 - 3.60% Coverage

Gruber says there are wins to be had when adopting AI, but businesses should be using it with the aim to augment work rather than automate it.
â€œIf you in general choose AI projects that automate, it tends to lead to competition with humans, and if we choose AI projects that augment, it tends to lead to collaboration with humans.â€
AI should be thought of as â€œa collaboratorâ€ or a â€œcreative partnerâ€ to augment workers or people to use technology more efficiently, Gruber believes.
But

A big positive McBride sees for AI is as an enabler of better outcomes and broader access to justice. "Itâ€™s a massive opportunity for people to save money, improve outcomes, and get access to justice where they otherwise couldnâ€™t." Many people face low-value but complex disputes that traditionally wouldnâ€™t justify days of legal advice, he says. "Now AI can untangle the issues, outline options, assess cost and risk, and present it all in a coherent way, within minutes." The quality of briefs he receives is already shifting.
"Last week I received a 10-page brief from a potential client. It was sharp, focused, and clearly articulated the issue and remedy. It had obviously been generated using ChatGPT and was one of the

best briefs Iâ€™ve seen from anyone." Using AI
