Name: 3.2 Streamlined Information pipelines

<Files\\Processed x Highly relevant\\2024-05-27 - RNZ - New Zealand continues to call> - § 1 reference coded [1.91% Coverage]

Reference 1 - 1.91% Coverage

"AI gives users significant advantages, including greater speed, efficiency, accuracy and situational awareness."

<Files\\Processed x Highly relevant\\2024-06-12 - NZH - AI is ushering in a new era> - § 2 references coded [6.28% Coverage]

Reference 1 - 3.61% Coverage

It can bring together information from a disparate variety of sources, such as real-time trading data, social media sentiment, economic indicators, and geopolitical events. The analysis of unstructured and complex data was previously incredibly time-consuming.
However, machine learning â€" a key component of AI â€" is now being used to rapidly identify market patterns. This allows for live insights, which can be critical in the fast-paced environment of financial markets.

Reference 2 - 2.67% Coverage

Given AIâ€™s ability to quickly identify patterns and anomalies in data, it can process vast amounts of transactions than would be possible for humans to review and spot potential fraud with greater speed and accuracy. The ability to process data in real-time is critical in mitigating losses and preventing fraudulent transactions from being completed.

<Files\\Processed x Highly relevant\\2024-07-03 - RNZ - AI for school tutoring, instan> - § 2 references coded [5.95% Coverage]

Reference 1 - 2.19% Coverage

Collins, whose 'digitising government' portfolio includes responsibility for AI policy, says the technology could also be used for government productivity gains, including processing Official Information Act requests.
Collins told RNZ she already uses ChatGPT to write drafts of her speeches.

Reference 2 - 3.76% Coverage

But New Zealand has no specific AI regulation and Collins is keen to get productivity gains from extending its use across government, including using it to process Official Information Act requests.
"It's a perfect example of how we in government could use AI because the rules around Official Information Act requests are very clear. The information or data that government agencies have access to - that can be used to actually provide OIA requests that are not held up any longer than they need to be."

<Files\\Processed x Highly relevant\\2024-07-11 - PRS - Researcher using AI to combat> - § 2 references coded [9.00% Coverage]

Reference 1 - 6.15% Coverage

In the past few years, Netsafe has been working with the Alan Turing institute in the UK to use AI, not to monitor hate speech, but to respond to it. â€œThe thing that we do see often in the progression of conversations is things can start quite small and escalate quickly,â€ Lyons said. â€œTo diffuse the tension and the heat in those conversations early, we know that that can lead to the harmful speech not occurring. â€œIt's really promising where weâ€™ve seen situations where AIâ€™s been able to try and attempt that.â€

Reference 2 - 2.86% Coverage

â€œA lot of the hate speech that you see is not really slurs, itâ€™s not an insult, itâ€™s more about questioning or not validating
peopleâ€™s existence or their identities - thatâ€™s a form of hate speech that should be our focus,â€ he said.

<Files\\Processed x Highly relevant\\2024-07-29 - TAM - Olympic sprinter Zoe Hobbs> - § 1 reference coded [3.44% Coverage]

Reference 1 - 3.44% Coverage

Using data for track-and-~eld is nothing new, but Mortimer - a former World Championships and Commonwealth Games hurdler, who has also coached Portia Bing, and Liam Malone to international medals - says VueMotion means more instant, DIY analysis and less reliance on waiting for number-crunching from outside experts.
“You don’t have to sift through the data. I t’s broken down quite nicely and it’s easy to understand - and it’s a lot quicker,” Mortimer says.

<Files\\Processed x Highly relevant\\2024-08-01 - GHT - Cameras cause delay Councillor> - § 1 reference coded [2.80% Coverage]

Reference 1 - 2.80% Coverage

â€œThe cameras themselves are easy. It is the AI [artificial intelligence] that reads information off that, and we give this to suppliers, so we just have to make sure that information isnâ€™t given to third parties,â€ Hadfield said.

<Files\\Processed x Highly relevant\\2024-08-02 - RNZ - NZ joins US military exercises> - § 5 references coded [16.53% Coverage]

Reference 1 - 1.30% Coverage

The Defence Force has been helping the US military with artificial intelligence-powered weapons to speed up what they call "kill chains".
U

Reference 2 - 6.73% Coverage

In an exercise in California with six nations in March, a F35 jetfighter with AI-driven sensors instantly passed targeting data along the "kill chain" to an unmanned kamikaze drone.
In another exercise - also attended by New Zealand - the controversial surveillance firm Palantir supplied a so-called "metaconstellation" of submarine-hunting satellites. US military chiefs said they were getting to the point where the combined forces can join up their technology in a "kill web".

"We've always aspired to get this 'kill web'-type of capability as a joint and combined force, and we're starting to get to that point," said the US commander of the "global information domination" exercises (GIDE) New Zealand has been part of.

Reference 3 - 2.81% Coverage

The British said the "major war-fighting experiment" with six partner nations, including New Zealand, was with "cutting-edge systems and technologies, designed to help make the British Army more lethal on the battlefield".
"Joint kill chains were reduced from minutes to seconds," reported enthusiasts.

Reference 4 - 4.27% Coverage

Palantir's involvement shows how their reach extends into space - its "capabilities were tested" during GIDE, "providing data sharing and real-time situational awareness", its website said.
Under a half-billion-dollar-plus contract with the Pentagon, Palantir has built what it calls a MetaConstellation, which uses commercial data, including satellite imagery, "to give a near real-time picture of a given battle space". It can also track bushfires or floods.

Reference 5 - 1.43% Coverage

Palantir's video promoting MetaConstellation simulates satellites passing data from one to another while hunting subs in the highlyfraught South China Sea.

Reference 1 - 2.00% Coverage

Airports - Customs is regularly upgrading the facial recognition technology at its e-gates, it checks your face against your passport in less than a blink of an eye - though the biometric data is then held for three months. It has just put out a tender to add a biosecurity function.

<Files\\Processed x Highly relevant\\2024-08-21 - RNZ - ACC sees benefits in using AI> - § 1 reference coded [8.90% Coverage]

Reference 1 - 8.90% Coverage

"In the time ACC has been using Copilot some of the benefits include reduced time and effort writing meeting notes, easier/quicker access to, and summarisation of, information, and [it] has reduced reporting and data processing times," said acting deputy chief executive of enterprise change, Campbell Mackie.

<Files\\Processed x Highly relevant\\2024-09-22 - NSM - Unmanned vessel makes waves wi> - § 1 reference coded [2.39% Coverage]

Reference 1 - 2.39% Coverage

While operating with 20 or 30 other vessels in close proximity, the system could work out in milliseconds the best way to move between them all.

<Files\\Processed x Highly relevant\\2024-10-13 - RNZ - Governments Identity Check fac> - § 1

reference coded [1.24% Coverage]

Reference 1 - 1.24% Coverage

It sees users send a photo of themselves in on their smartphone, which is matched automatically against their photo in the passport or driver's licence database.

<Files\\Processed x Highly relevant\\2024-11-06 - RNZ - New Zealand AI tech company Mi> - § 1 reference coded [6.54% Coverage]

Reference 1 - 6.54% Coverage

"The brain is the processor that also sits on site in the tannery that has all the software connections. That's where our artificial intelligence resides and makes the decisions about what the hide looks like and how many defects it's got." Each client had their own specifications on the hide they wanted, and any imperfections could be quickly detected, she said. "I think now there are more than 25 types of defects that we can see when we look at the hide in a few seconds."

<Files\\Processed x Highly relevant\\2024-11-13 - PST - NZ firms AI detects disease in> - § 1 reference coded [2.54% Coverage]

Reference 1 - 2.54% Coverage

Its technology monitors the health of the herds, and informs farmers and veterinarians for medical intervention. On use in farms, it was found to have reduced the death rate from an average of 4.8% down to 1.4%.

<Files\\Processed x Highly relevant\\2024-12-04 - NZH - The rapid rise and rise of> - § 2 references coded [4.81% Coverage]

Reference 1 - 2.22% Coverage

Before AI intervened, sifting through retina data to detect the patients who might need further treatment was painstaking, difficult work. Not only does AI speed the testing, which is vital given that the most affected people often struggle to get medical treatment, it is also more accurate than the manual process.

Reference 2 - 2.59% Coverage

Mosgiel-based Techion partnered with AI developers Aware Group to create an AI system that can detect livestock parasites in faecal samples within minutes.
Farmers can act immediately without waiting for results. More importantly, by increasing the accuracy of tests, farmers can reduce unnecessary drenching which is better for livestock health and farm efficiency.

<Files\\Processed x Highly relevant\\2024-12-20 - STF - How Santa is using artificial> - § 1 reference coded [1.83% Coverage]

Reference 1 - 1.83% Coverage

Letters (and for many, emails) to Santa are now processed with the help of AI and sorted according to logistics such as urgency, region, size, weight and required landing area.

<Files\\Processed x Highly relevant\\2025-02-04 - RNZ - New Zealand public services re> - § 2 references coded [3.79% Coverage]

Reference 1 - 1.78% Coverage

The documents showed Health NZ clinicians used AI to help work out the risk of a patient dying after surgery, while Auckland Transport had deployed AI to help speed up its response to certain official information requests.

Reference 2 - 2.01% Coverage

At the Department of Conservation, staff were using AI tools to process trail camera footage, including a program called Alita. "It just gives you file name, date, time and what animal it thinks it saw," DOC science advisor Joris Tinnemans explained.

<Files\\Processed x Highly relevant\\2025-02-17 - WHC - AI tackles woody debris proble> - § 3 references coded [12.25% Coverage]

Reference 1 - 3.43% Coverage

The council said using AI technology had been a â€œgame-changerâ€ for the project because it was a smarter and more cost-effective way to quickly identify the location of woody debris and estimate volumes.
I

Reference 2 - 5.75% Coverage

â€œBefore AI, the process was incredibly time-consuming. â€œWe used older imagery and on-screen mapping techniques, but recent storms often changed the debris locations. We had to do site visits and use drones to capture images, then review them to decide whether to remove the debris or not. AI has quickly identified thousands of debris locations.â

Reference 3 - 3.07% Coverage

â€œThe use of AI and drone imagery not only speeds up the decision-making process but also ensures that we have a current and accurate view of the woody debris issues within the region.â€

<Files\\Processed x Highly relevant\\2025-02-20 - TST - AI tech gives farmers meat qua> - § 1 reference coded [5.54% Coverage]

Reference 1 - 5.54% Coverage

The assessment tool was linked to a dashboard farmers could use to track the meat quality of their livestock and make informed decisions on breeding, feeding, and livestock management.
Alliance was already measuring carcass weight and meat yield; the new technology measured intramuscular fat in lamb and marbling in beef â€" the fat that dictates tenderness, juiciness and flavour.

<Files\\Processed x Highly relevant\\2025-02-26 - TST - An arborists MRI- Trial tech m> - § 1 reference coded [5.71% Coverage]

Reference 1 - 5.71% Coverage

He added that the technology would make arborists far more productive by giving them timely and accurate information. â€œArborists survey up to 150 trees a day. This system will do 8000 with pinpoint accuracy.â€ Greehill co-founder and chief executive Gabor Goertz said the AI technology would not replace arborists, but rather empower them.

<Files\\Processed x Highly relevant\\2025-03-16 - TST - This AI technology could reall> - § 4 references coded [9.95% Coverage]

Reference 1 - 2.41% Coverage

Imagine, as a business owner or the leader of a political party, being able to interview a focus group, including with specific follow-up questions, and then have a summary of findings â€" all within the space of a few hours.

Reference 2 - 4.52% Coverage

Itâ€™s not yet the gold standard, but it is the kind of technology that could see researchers and polling groups spending hours, rather than days or weeks, interviewing and then writing reports.
The development of artificial intelligence will be a game changer for the polling industry, says Talbot, with new companies opening the door to fast, accessible polling â€" only possible due to recent technology advances.
Po

Reference 3 - 1.82% Coverage

For example, in Australia, it had been used to ask people how they feel about topics such as climate change, â€œand theyâ€™re getting results back in hours, not weeksâ€ .

Reference 4 - 1.20% Coverage

It can then write up a summary of 16 interviews and email a report. â€œAnd it all happens in about five hours.â€

<Files\\Processed x Highly relevant\\2025-03-18 - RNZ - The future of warfare- Killer> - § 1 reference coded [3.60% Coverage]

Reference 1 - 3.60% Coverage

Project Convergence - which has exercises going on in Australia and the Philippines - has previously talked up how it helped the allies improve the speed of the "kill web", while US Space Force commanders have spoken of the threat from China's "kill web", where satellites can target any US asset in the Pacific, with kamikaze drones or missiles linked in.
Thunderforge would speed up those systems further.
The system would see Silicon Valley firm Scale AI using generative AI from Microsoft to help commanders make decisions, Pentagon reports said.

<Files\\Processed x Highly relevant\\2025-03-20 - WKT - Good luck getting a job withou> - § 1 reference coded [1.74% Coverage]

Reference 1 - 1.74% Coverage

But it not might be â€œa real personâ€ they would be dealing with. Instead, it might be another AI intermediary that the employer was using to scan the internet for candidates and to field applications.

<Files\\Processed x Highly relevant\\2025-03-24 - RNZ - Spy agency minister Judith Col> - § 1 reference coded [2.91% Coverage]

Reference 1 - 2.91% Coverage

Singapore has facial recognition woven into its Singpass system that provides access to 2700 public and commercial services. The government here has referred to this system, as it has incorporated facial recognition into a new online identity verification system run by Internal Affairs.

<Files\\Processed x Highly relevant\\2025-04-07 - PRS - Will AI replace local politici> - § 1 reference coded [3.86% Coverage]

Reference 1 - 3.86% Coverage

Speaking to Local Democracy Reporting, Swiggs echoed the thoughts of Davies in suggesting that with advancing technology, people could vote on how rates are spent on a phone app. AI could then collate the data and make a decision in real time.
