The phrase "filterworld" describes the immersive environment of algorithms that are adjusted to what we might like to consume.
"An algorithm is just an equation ... and what they judge by is really engagement. So it's what's already popular, what are other people looking at, what are other people clicking on and I think that tends to reinforce this sort of homogeneity. "It funnels us towards the same styles or aesthetics or sounds that work for the biggest number of people."
While there ar

While the marketing message was that recommendations would be personalised, the reality was they would be what was most convenient for the platform, he said. He pointed to Netflix as an example. "[It's] supposed to be so personal, it shows me what I want to watch. But actually Netflix algorithmically adjusts the thumbnails of the shows and movies to make them appeal to you more. "Rather than catering to you, it's manipulating you into thinking that you like what's already there, which I think is really sad." So did ex

Reference 1 - 2.56% Coverage

A potential benefit of AI could be in creating a personalised learning experience for students, she said. "So every student they can have their own tailored curriculum that is really based on their needs and their pace and the other one it is really having access to their intelligent tutoring system, that they are

available for a student, [an] assessment system available to support a student 24/7."

They are using AI to create lessons, mark students' work, and individualise their teaching in ways that were not previously possible.

Reference 2 - 5.99% Coverage

Onslow College deputy principal Michael Bangma said at its most basic, AI was a better form of internet search engine for students and teachers alike. But its potential was much greater and he used AI to create units of work tailored to the interests of individual students.
"I've been able to build new units of work on different contexts very quickly that I had very little prior knowledge around because I can use it to curate and research so quickly," he said.
"Instead of having the whole class learning the same thing, one student could be learning about satellites in space, then another student could be learning about solar panels on a roof, and I can easily make resources that work for both of them... in the past workload-wise that just wouldn't have been possible."
Ro

<Files\\Processed x Highly relevant\\2024-12-05 - PRS - New Zealands first AI gym open> - § 1 reference coded [10.13% Coverage]

Reference 1 - 10.13% Coverage

Through several checks, including a mind test, the wellness age was calculated on the userâ€™s actual age compared to others in the age bracket. â€œItâ€™s quite motivating, if itâ€™s older, that can be quite motivating in itself.â€
With a check-up done, a scanner then measured limbs and body length to help determine how each piece of equipment should be set up for each person.
All the information was stored, so when a client scanned in for their workout the technology recognised them and adjusted the gym equipment accordingly. â€œIf you love data and technology, itâ€™s incredible,â€ Rice said.
â€œI can sit on one piece and everythingâ€™s set up for me, it knows my mobility, it knows my seat height, it knows what I want to achieve, whether thatâ€™s performance and power or building muscle tone or losing weight.â€

Reference 1 - 2.78% Coverage

But sooner or later many of the platforms that companies use to manage their applicants will also have AI capability, he says. â€œBeing able to then use AI on their side, to then interact with AI on the other side, is something that will be very interesting in the next five or 10 years. I don't think it's too far away.â€

Reference 2 - 1.74% Coverage

But it not might be â€œa real personâ€ they would be dealing with. Instead, it might be another AI intermediary that the employer was using to scan the internet for candidates and to field applications.

<Files\\Processed x Highly relevant\\2025-04-07 - RNZ - The New Zealand institution he> - § 1 reference coded [9.44% Coverage]

Reference 1 - 9.44% Coverage

"So now ... in almost all but probably about three of the top positions on the website as you're reading, you're getting served to you what a machine, or the AI algorithm, anticipates that you will read and be interested in."
If you've completed a survey telling the paper what your own particular interests are, that will be refined even further. The dominant flow of content will be tailored to you. "So the Herald will change per person reading it.
"I imagine their biggest [stories] they'll want to keep in position and everyone will see them, but yeah, it's going to be a slightly different experience. The argument is that it's better, that people respond more and engage more with content that they've previously wanted to see. The counter-argument is that a lot of people will be served up material they have clicked on but it might be a crash on the motorway, bad weather, celebrity news from here or overseas, court cases that are particularly gruesome or alluring ... that kind of thing.
"So

<Files\\Processed x Highly relevant\\2025-04-21 - NZH - Ask the right questions to use> - § 1 reference coded [3.20% Coverage]

Reference 1 - 3.20% Coverage

If the answer isnâ€™t sufficiently tailored to your personal situation, then ask follow-up questions, just as you might ask a friend or adviser. Does that relate to New Zealand? How would you tailor that to my income of $xx,xxx? But I want to travel before I pay off my student loan. And so on.
