Reference 1 - 4.29% Coverage

Police mostly used the AI-driven tech to corroborate existing evidence, place vehicles at times and locations for an investigation, and as supporting evidence in criminal cases, Chen said. A police technologies list described it as a "retail crime intelligence platform".

<Files\\Processed x Highly relevant\\2024-05-21 - NZH - Air NZ taking AI into the skie> - § 1 reference coded [8.78% Coverage]

Reference 1 - 8.78% Coverage

One area relates to the food on passengersâ€™ plates. Last October, Air New Zealand trialled using AI with its catering provider LSG to analyse food passengers did not eat during flights from Los Angeles and Hong Kong.
More than 30,000 photographs were taken of meal trays during two trial periods. AI analysis of these photographs provided â€œfascinating insights into the eating habits and preferencesâ€ of customers, Ravishankar said.
One insight, according to Foran, was about hummus.
â€œWe know for example, that customers werenâ€™t all that enamoured with the blue cheese and beetroot hummus, so weâ€™ve been able to change that,â€ he said. Trials also indicated people in economy class preferred leafy salads over grain-based salads. â€œWe will look to make changes here too,â€ Ravishankar said.

<Files\\Processed x Highly relevant\\2024-05-21 - RNZ - US company with NZ prison cont> - § 1 reference coded [1.54% Coverage]

Reference 1 - 1.54% Coverage

Many US prisons already use AI to listen to inmates' phonecalls. Honeywell also uses autonomous vehicles to patrol the perimeter of a Western Australia prison.

It would use remote sensing, panoramic imagery and artificial intelligence to collect and measure information.
The data collected was then processed into an AI-powered Smart Tree Inventory that enabled councils

to view individual trees and identify potential hazards before they became risks, Walsh said.
He added that the technology would make arborists far more productive by giving them timely and accurate information. â€œArborists survey up to 150 trees a day. This system will do 8000 with pinpoint accuracy.â€ Greehill co-founder and chief executive Gabor Goertz said the AI technology would not replace arborists, but rather empower them.
â€œThe arborist is the doctor, and the AI technology is the MRI. Just as doctors use MRIs to get precise diagnostics and improve treatment plans, arborists can use AI-driven tree assessments to enhance their expertise.â€ This meant spending more time on solutions rather than manual inspections, Goertz said.
The monitoring system could identify areas with low-canopy cover to help define potential planting sites. It could also track trends in urban forest health over time.

About the same time Project Convergence began, the Pentagon announced its new Thunderforge project to embed generative AI into "operational decision-making" for the first time.
"Thunderforge marks a decisive shift toward AI-powered, data-driven warfare... respond to emerging challenges at machine speed ," it said.

Project Convergence - which has exercises going on in Australia and the Philippines - has previously talked up how it helped the allies improve the speed of the "kill web", while US Space Force commanders have spoken of the threat from China's "kill web", where satellites can target any US asset in the Pacific, with kamikaze drones or missiles linked in.
Thunderforge would speed up those systems further.
The system would see Silicon Valley firm Scale AI using generative AI from Microsoft to help commanders make decisions, Pentagon reports said.

Speaking to Local Democracy Reporting, Swiggs echoed the thoughts of Davies in suggesting that with advancing technology, people could vote on how rates are spent on a phone app. AI could then collate the data and make a decision in real time. â€˜â€˜It is pie in sky stuff,â€™â€™ Swiggs admitted. â€˜â€˜It is scary, but I also see opportunities for making better decisions.â€™â€™
