<Files\\Processed x Highly relevant\\2024-10-17 - SCP - NZQA To Trial Computer-marking> - § 3 references coded [17.44% Coverage]

Reference 1 - 7.76% Coverage

She said the literacy and numeracy tests were held twice a year and in the most recent round in September, students completed more than 152,200 assessments, which were being marked by a contracted workforce of 186 markers. Students and teachers wanted the results as quickly as possible, and auto-marking could help speed up the process, she said. Mar

Reference 2 - 3.91% Coverage

"Following the May 2024 assessment event, this allowed us to return results for reading to students and schools several days earlier than results for other standards," she said.

Reference 3 - 5.77% Coverage

"This shows whether automated text scoring would be suitably reliable and accurate," she said.
"If the trial is successful, we plan to use automated text scoring in the writing assessments from May 2025, which will contribute to reducing the turnaround time."

<Files\\Processed x Highly relevant\\2024-10-30 - STF - Embracing AI can be scary but> - § 2 references coded [9.72% Coverage]

Reference 1 - 0.92% Coverage

â€œAI is a fantastic tool to help enhance processes, to reduce friction and increase personalisation,â€ he says.

Reference 2 - 8.80% Coverage

Using AI technology at the photography business means that product shots, for instance, taking a photo of a piece of furniture on a snowclad hillside, can be done in the studio rather than on location with all the accompanying logistical issues and light and weather complications.
â€œThe process involves generating an AI background then shooting the product in the studio in a cohesive manner with the background and then compositing the two together,â€ says Waugh.
Matter Studio is sent a photo of a piece of furniture from a Chinese warehouse. The team can train an AI model using those photos to
generate imagery of that product with a location background before the item is even finished and on its way to the Australian furniture retailer.
The studioâ€™s embrace of AI ability has brought in new customers, in the furniture industry, but Waugh can equally see great potential in fast moving consumer goods, jewellery, fashion, alcohol and automotive sectors. He shares the latest explorations and workings on Linked In and this has brought in new clients.

But the faster, more efficient, AI-driven robots offered a solution that could be incorporated into its current setup. â€œThis warehouse used to be overflowing. Weâ€™ve saved 550 pallets through this robotic machine,â€ Douglas said. Kardexâ€™s AutoStore had â€œthe highest storage density of any automation in the market and itâ€™s also extremely fastâ€ . T
