The Whakaari/White Island tragedy has led scientists to develop an eruption predictor tool using AI, which they hope will prevent another fatal volcanic disaster.
T

Reference 2 - 2.95% Coverage

Ardid said the priority now was figuring out a rollout in New Zealand and internationally to improve safety for the millions of people who live within 10 kilometres of a volcano.

Reference 3 - 1.62% Coverage

"So they can potentially make more timely decisions or decisions that will potentially save lives."

<Files\\Processed x Highly relevant\\2025-02-25 - WHC - AI models might help to predic> - § 1 reference coded [4.94% Coverage]

Reference 1 - 4.94% Coverage

â€œThis finding could be a breakthrough for eruption forecasting,â€ the studyâ€™s lead author, Dr

Alberto Ardid, said.
â€œTimely and accurate eruption forecasting can save lives, reduce economic losses and minimise losses due to disruptions to air travel, agriculture and global supply chains.â€
St

<Files\\Processed x Highly relevant\\2025-02-26 - TST - An arborists MRI- Trial tech m> - § 2 references coded [7.49% Coverage]

Reference 1 - 4.19% Coverage

â€œThe system provides valuable data to organisations, including councils and transport agencies. It can calculate an areaâ€™s canopy cover, how much carbon the trees are removing and information on the health of individual trees to avoid accidents.â€

Reference 2 - 3.30% Coverage

The data collected was then processed into an AI-powered Smart Tree Inventory that enabled councils to view individual trees and identify potential hazards before they became risks, Walsh said.
He

<Files\\Processed x Highly relevant\\2025-02-27 - RNZ - Baby steps for AI volcano fore> - § 2 references coded [13.70% Coverage]

Reference 1 - 2.68% Coverage

A volcanologist says a new artificial intelligence (AI) volcano forecasting tool, with the potential to save lives around the world, is still some way off being rolled out in places like Tonga.
I

Reference 2 - 11.02% Coverage

"Anything that we can develop in the terms of AI software, types of approaches that are labour-saving approaches, or kind of prefiltering and pre-screening approaches can be really, really helpful for countries without volcano scientists.
"Tonga, for example, where you have a small number of scientists in their group, and not many, one or two have been trained in volcano seismology and there aren't many that have very deep, in-depth training.
"We have people trained at masters level, but we don't have that many PhD level trained people in the South West Pacific, around the volcano monitoring. "So any kind of tools that we have that help to automatically process signals and raise awareness about volcanoes that might be pressurizing towards eruption, I think is there's a great deal of assistance."

<Files\\Processed x Highly relevant\\2025-03-18 - RNZ - The future of warfare- Killer> - § 2 references coded [2.17% Coverage]

Reference 1 - 1.56% Coverage

The aim was to "blend soldiers with robotic and autonomous vehicles". "No blood for first contact," is the Americans' new motto. "Shame on us if we make first contact with a human again. Let's trade robots for that," said one commander.
T
