Reference 1 - 3.61% Coverage

Time Magazine said Jones and his team had focused on ensuring Māori communities retained ownership and control over their digital data.

“In the digital world, data is like land,” he explained. “I f we don’t have control over our data, we risk losing our identity in this new digital landscape,” Jones told Time.

Reference 2 - 6.08% Coverage

But Jones told Time his vision extended beyond the technical realm, saying language had the power to reshape societal attitudes and foster greater respect between cultures.
“I f we can encourage people to respect another language, we can also in~uence how they perceive and interact with other cultures,” he said.
For Jones, the work at Te Hiku Media is about much more than just language preservation – it’s about reclaiming Māori sovereignty, shaping the future, and addressing the impacts of colonisation head-on, he said.

<Files\\Processed x Highly relevant\\2024-09-06 - NAD - Te Hiku CEO on top 100 list al> - § 1 reference coded [11.89% Coverage]

Reference 1 - 11.89% Coverage

Jones is adamant that this technology is owned by and directly benefits his own MÄ ori community, which has long been marginalised and oppressed.
â€œIn the digital world, data is like land,â€ he said. â€œIf we do not have control, governance, and ongoing guardianship of our data as indigenous people, we will be landless in the digital world, too.â€

This year, Te Hiku is working with Radio New Zealand to provide better te reo MÄ ori transcripts; the New Zealand Qualifications Authority for language exams; and a Hawaiian translation organisation, to see how the collaborations within the larger Polynesian language group might benefit everyone involved.
Jones hopes that Te Hikuâ€™s efforts go far beyond sheer language acquisition. â€œIf we can enhance the way that someone respects another language, we too may be able to shape the way they consider other people,â€ he said.
â€œThis is about Mana motuhake: being in control of oneâ€™s destiny, and growing an economic future for your people when that has largely been diminished through the process of colonisation.â€

Reference 1 - 1.36% Coverage

A Māori tech innovator and language revitalist wants to see te reo Māori thrive in-person and digitally.

Reference 2 - 2.81% Coverage

The company has been developing artificial intelligence (AI) tools that transcribe te reo Māori, give pronunciation feedback, and turn text into speech at a 92 percent accuracy rate, making it the best in the world.

Reference 3 - 7.20% Coverage

Speaking on the proliferation of AI tools in recent years, Jones said he was looking forward to seeing what the future would hold.
"Technology is not new to us as Māori. We want to contribute to humanity's expression of identity and the ongoing survival of our own identity for our mokopuna, and contribute to ensuring that our language survives into the future.
"If [te reo Māori] doesn't have a digital future, it's going to be very difficult for us to ensure that it is an option for communication in the world that our mokopuna will live in."

His company, based out of Kaitaia, Te Hiku Media, has reached a 92% accuracy rate with their speech to text model, the best in the world, something that has attracted international attention.

Reference 2 - 9.71% Coverage

Speaking to Stuff from San Francisco, where he is being acknowledged for his work, Jones said that AI offers a huge opportunity to assist in reversing cultural decline and language decline.
â€œOur language has been harmed through the colonisation process, but I think the opportunity here for learning acquisition of te reo MÄ ori and education opportunities are huge.â€
Jonesâ€™ company Te Hiku Media has created both speech to text tools and text to speech tools, and Jones believes the tools they have developed will help lead to better pronunciation and better grammar.
â€œOur tools are natural language processing tools. We have an automatic speech recognition system, which is the best in the world for transcribing te reo MÄ ori. We also have a speech synthesis tool, and a pronunciation feedback model.â€
â€œThese tools are going to be hugely important if we think about how we address language acquisition in a digital sense,â€ Jones said.

Māori language models - such as Te Hiku Media's model - provide an opportunity to set the benchmark much higher, he said.
"Providing quality examples of pronunciations like place names... these enhance the language acquisition opportunities for language learners and mispronunciation often obscures the intelligence we hope to convey through speech... What I would say is that accepting a 50 percent accuracy as a benchmark for te reo Māori is just unacceptable."
