McLiver said it was still early days for the adoption of AI, but the pace of change would be rapid, with New Zealand businesses poised for change.
"While we are still at the start line, there is no question organisations are spending money to acquire the skills they need to transform their business," McLiver said. "There will be a whole series of new jobs created from this technology.

â€œAs an investor, youâ€™re always looking to invest in something thatâ€™s got strong tailwinds, and from a utility perspective or power companies, it really looks like they do have tailwinds for the foreseeable future.â€
The utility sector was the best-performing sector in the US year to date, although interest rates were still high and these were dividendpaying stocks that didnâ€™t normally grow fast.
â€œThey normally trade very much around where bond yields are, but now that investors can see that, they will be getting growth as well as a yield,â€ Taylor said.

Recent analysis from Goldman Sachs suggests that Nvidia represents the first phase of the AI boom. It says the next phase will involve infrastructure companies that are essential to the development of AI: semiconductor firms, cloud providers, data centres, security software and utilities companies.
The third phase, it projects, will benefit those companies that can enhance their revenues from the adoption and monetisation of AI technologies.

This would be a crucial step in advancing the â€œGreen Hydrogen Intelligent City planâ€ , the press release said, which proposes 100 such centres around the world by 2030.
It may sound like gibberish, but the proposal has been simmering for some time. North Rakaia donated $8000 to the National Party in late November, when it was clear it would lead a coalition government. Last month, Mobii Green Energyâ€™s chairman, Kenny Tseng, met with Climate Change Minister Simon Watts.
